PeopleDesk

Human Resource Management System (HRMS) — Product Documentation

Product Name	PeopleDesk
Document Title	PeopleDesk Human Resource Management System (HRMS) — Product Documentation
Document Type	Official Product Handbook (client-facing)
Generated Date	22 July 2026
Product Version	2.0
Document Version	1.0
Audience	Customers, business users, product owners, management, sales and pre-sales teams, implementation consultants

Document Purpose

This handbook describes the PeopleDesk solution in business terms. It explains what the product does, which business modules it provides, what each feature is used for, which business rules govern its behaviour, how work flows end to end, and what value the solution delivers to an organization.

It is written for readers with no technical background. No programming or system knowledge is required.

A note on scope. This document describes only capabilities that are confirmed to exist in the delivered solution. Where a capability could not be confirmed, the document states *"Information not available in the current application."* rather than making an assumption. Capabilities that exist as configuration options but whose detailed policy behaviour varies by customer are described at the level that is common to all customers.

1. Executive Summary

PeopleDesk is a complete Human Resource Management System (HRMS) that manages the full working life of an employee — from the moment a candidate is hired, through daily attendance, leave, performance and benefits, to final settlement on exit.

The solution is delivered as a subscription service. Each client organization operates in its own secure workspace with its own organizational structure, policies, approval rules and reporting, while sharing a single, continuously maintained product.

Who uses it

PeopleDesk serves every level of an organization:

- **Employees** use self-service to apply for leave, correct attendance, request loans and assets, and view their own pay and records.
- **Managers** approve their team's requests and monitor team attendance and performance.
- **HR teams** maintain people data, run policies, administer benefits, and manage the employee lifecycle.
- **Payroll and finance teams** run monthly payroll, manage funds and loans, and produce statutory and banking outputs.
- **Management** uses dashboards and reports to monitor workforce cost, headcount, attendance discipline and performance.

Business problems it solves

Problem	How PeopleDesk addresses it
People data scattered across spreadsheets and departments	A single employee record that every module reads from
Manual attendance collection and reconciliation	Automated capture from time-recording devices, mobile and web, reconciled against shift and roster
Slow, undocumented approvals	A configurable approval engine covering more than forty request types, with full history
Error-prone, labour-intensive payroll	A structured monthly payroll run that consumes attendance, leave, loans and statutory rules automatically
Poor visibility of workforce cost and compliance	Approximately 130 standard reports covering people, time, pay, funds, assets and performance
Employees dependent on HR for routine requests	A full employee self-service portal on web and mobile

Key business benefits

- **Efficiency** — routine HR transactions move from email and paper into structured, tracked workflows.
- **Accuracy** — pay is calculated from recorded attendance, approved leave and configured policy rather than manual entry.
- **Compliance** — approvals, changes and access to sensitive data leave an audit trail; statutory outputs are produced from the same data used to pay employees.
- **Transparency** — employees see their own balances, payslips and request status without asking HR.
- **Control** — access is granted by role and limited to a defined part of the organization.

Core business capabilities

Employee records and lifecycle · Organizational structure · Attendance and time management · Leave and movement · Payroll and tax · Allowances, deductions and bonuses · Loans and financial aid · Provident fund and gratuity · Employee benefits and facilities · Asset management · Expense management · Recruitment intake and onboarding · Performance management · Training and development · Approval workflow · Reporting and analytics · Notifications · Access control and administration.

---

2. Product Overview

Product purpose

PeopleDesk exists to give an organization one reliable, governed system for everything related to its people: who they are, where they sit in the organization, when they work, what they are entitled to, what they are paid, what they are accountable for, and what they are owed when they leave.

Every module reads from the same employee record, so a change made once — a promotion, a transfer, a separation date — is reflected consistently across attendance, leave, payroll, benefits and reporting.

Target organizations

The solution is designed for medium and large employers with structured HR and payroll operations, and is particularly suited to organizations that have:

- multiple business units, workplaces or locations under one corporate group;
- a mix of workforce categories — permanent staff, contract, workers, interns and consultants — with different policies for each;
- shift-based or roster-based operations alongside conventional office hours;
- statutory obligations for income tax, provident fund and gratuity;
- a need for formal, auditable approval of employee transactions.

The solution supports several organizations operating side by side on the same service, each fully separated from the others, and supports differing policy and reporting requirements between them.

Typical users

User	Uses PeopleDesk to
Employee	Apply for leave, adjust attendance, request loans, assets and expenses, view payslips and balances
Line manager / supervisor	Approve team requests, monitor team attendance and performance
HR officer	Maintain employee records, onboarding, confirmations, movements, separations
HR administrator	Configure organizational structure, policies, leave types, approval routes
Payroll officer	Assign salary structures, run monthly payroll, produce payslips and bank instructions
Benefits / fund administrator	Administer provident fund, gratuity policy, investments and profit distribution
Asset officer	Register, assign, maintain and dispose of company assets
Management	Review workforce cost, headcount, attendance and performance reporting
System administrator	Manage users, roles and access scope

Business objectives

1. Establish a single source of truth for workforce data.
2. Automate the high-volume, repetitive parts of HR and payroll operations.
3. Make every material employee transaction approved, dated and traceable.
4. Deliver pay accurately and on schedule, with statutory obligations met.
5. Give managers and executives current information rather than month-old spreadsheets.
6. Reduce the administrative burden on HR so it can focus on people rather than paperwork.

Overall capabilities at a glance

Dimension	Scale in the delivered solution
Business modules	17
Menu areas in the application	21 top-level business areas, 639 menu entries (579 active)
Application screens	Approximately 780
Standard reports and document outputs	Approximately 130
Approval-routed request types	44
Automated background processes	48 scheduled or continuous processes
Delivery model	Subscription service, multi-organization, web and mobile

3. Business Modules

The solution is organized into seventeen business modules. Each is described below in terms of what it is for, what it is responsible for, the value it delivers, and which other business areas it connects to.

3.1 Employee Management

Business purpose. The system of record for people. Holds identity, employment details, organizational placement and personal information for every employee.

Key responsibilities. Employee records and documents; employment types; placement in department, designation, grade, location and cost centre; reporting relationships; probation and confirmation; transfers and promotions; separations; employee documents, letters and identity cards.

Business benefits. One accurate, current employee record removes duplicate data entry, keeps every other module consistent, and provides a defensible basis for pay, entitlement and reporting.

Related business areas. All modules depend on this one. Attendance, leave, payroll, benefits and access control all read the employee's status, placement and reporting line.

3.2 Organizational Framework

Business purpose. Defines the structural backbone — hierarchy, locations, grades, shifts, rosters and calendars — that other modules use for scoping, approvals and scheduling.

Key responsibilities. Business units, workplace groups, workplaces, departments, sections, divisions and positions; designations and pay-scale grades; cost centres; holiday calendars and weekly-off patterns; shift definitions and rostering; territory and job-location structures.

Business benefits. Changes to structure are made once and applied everywhere; approvals and reporting automatically follow the organization as it changes.

Related business areas. Attendance and leave (calendars and shifts), payroll (cost centres and pay groups), access control (scope), employee records (placement).

3.3 Attendance and Time Management

Business purpose. Captures when employees work, reconciles it against their scheduled shift, and feeds the result into leave and payroll.

Key responsibilities. Collection of clock events from time-recording devices, mobile and web; roster generation and assignment; daily attendance resolution (present, late, half day, absent, leave, holiday, weekly off); attendance adjustment and regularization requests; overtime capture, planning and approval; remote and field attendance; late and absence penalties; flexible timesheets.

Business benefits. Removes manual attendance registers and reconciliation, applies attendance policy consistently, and gives payroll a reliable input.

Related business areas. Leave (approved leave overrides absence), payroll (unpaid days, overtime and penalties affect pay), organizational framework (shifts, rosters, calendars), notifications (late and absence alerts).

3.4 Leave and Movement

Business purpose. Manages entitlements, requests, approvals and balances for all categories of leave, and for official movement away from the workplace.

Key responsibilities. Leave types and policies; entitlement and accrual; balance maintenance and year-end processing; leave application, approval and cancellation; leave encashment; movement (official duty) applications; bridge-leave and holiday-penalty handling.

Business benefits. Employees see accurate balances before applying; managers approve within policy; unpaid absence flows automatically into payroll; year-end carry-forward and lapse are processed consistently.

Related business areas. Attendance, payroll, employee records, notifications.

3.5 Payroll and Tax

Business purpose. Computes salaries from the compensation structure, attendance, leave and statutory rules, then produces payslips and disbursement instructions. The highest-value and highest-compliance module in the solution.

Key responsibilities. Salary structure and element setup; salary assignment, increments and grade-based pay; monthly salary generation; arrear and retroactive processing; bonus generation; advance salary; income-tax deduction and certificates; payslips, salary certificates, bank advice and cash-payment sheets; payroll reconciliation and summary reporting.

Business benefits. Pay is produced from recorded facts rather than manual compilation, is reproducible and auditable, and can be reconciled month over month.

Related business areas. Attendance, leave, loans, benefits (provident fund), employee records, organizational framework, approval workflow.

3.6 Allowance, Deduction and Bonus

Business purpose. Manages the variable elements of pay that sit alongside the fixed salary structure.

Key responsibilities. Definition of earning and deduction elements and their rules; fixed and one-off additions and deductions; bonus setup and generation; off-day allowances; approval routing for salary additions and deductions.

Business benefits. Variable pay is handled within policy and approval rather than as manual payroll adjustments.

Related business areas. Payroll, approval workflow, attendance.

3.7 Loan and Financial Aid

Business purpose. Administers employee borrowing in two forms — general cash loans with guarantors, and loans taken against the employee's own provident fund balance — and recovers them through payroll.

Key responsibilities. Loan types; loan application with requested and approved amounts, instalments and guarantors; loan approval; instalment schedules, rescheduling and holds; provident-fund loan eligibility and amortization schedule; early settlement; instalment recovery through the monthly payroll run; loan history and lifecycle reporting.

Business benefits. Gives employees a governed route to financial support while ensuring the organization recovers instalments automatically and tracks outstanding balances accurately.

Related business areas. Payroll (recovery), benefits (provident-fund balance), retirement (recovery at final settlement), approval workflow.

3.8 Benefits Management

Business purpose. Administers employee benefit funds and facilities.

Key responsibilities. Provident-fund policy, eligibility and member ledgers; fund investment and collection of returns; distribution of investment profit to members; gratuity policy setup by service band and employment type; cafeteria and meal-subsidy pricing, consumption and reporting; security-money deposits and their disbursement.

Business benefits. Funds held on behalf of employees are administered transparently, with member-level balances, documented investment activity and auditable distributions.

Related business areas. Payroll (contributions), retirement (payout at exit), loans (fund balance as collateral), approval workflow.

Insurance note. The solution records an employee's insurance reference on the employee identification profile, and benefit schemes are administered through the funds and facilities listed above. **Insurance policy administration, premium management, enrolment and claims processing are not part of the current application.**

3.9 Retirement, Separation and Final Settlement

Business purpose. Manages the end of employment and calculates what the organization owes, or is owed by, a departing employee.

Key responsibilities. Separation types and policies; separation application and approval; last-working-day determination; separation clearance across departments; gratuity calculation; provident-fund settlement; final settlement computation and documentation; exit interviews.

Business benefits. Exits are handled consistently and completely, with all outstanding balances, recoveries and entitlements brought into a single settlement figure and document.

Related business areas. Payroll, leave, loans, benefits, assets, approval workflow.

3.10 Recruitment Intake and Onboarding

Business purpose. Converts a hiring decision into a complete employee record, and manages headcount requests.

Key responsibilities. Employee (manpower) requisition with approval; creation of a pre-employment record; a shareable self-fill form allowing the new joiner to submit their own personal, educational, employment-history and document information before joining; HR review and promotion of that record into a live employee; intake of candidates already hired in the organization's recruitment system.

Business benefits. New joiners arrive with their data already captured and verified, reducing first-day administration and improving data completeness.

Related business areas. Employee management, approval workflow, external recruitment system.

Note. Candidate sourcing, job advertising, applications and interview management take place in a separate recruitment system; PeopleDesk consumes the hiring outcome rather than running the recruitment funnel itself.

3.11 Performance Management

Business purpose. Plans, measures and evaluates employee performance, and supports development conversations.

Key responsibilities. Objective and key-performance-indicator catalogue; mapping of indicators to employees, departments, designations and business units; annual target setting with weightings and benchmarks; achievement entry and scorecards; behavioural assessment questionnaires; values and competency assessment by employee and supervisor; multi-stakeholder evaluation routing with weightings; assessment timelines; appraisal grading bands; coaching tools including the Johari window, the GROW model, work plans, action plans and individual development plans.

Business benefits. Performance is measured against agreed, weighted objectives rather than impressions, and development actions are recorded and followed up.

Related business areas. Employee management, organizational framework, training and development.

3.12 Training and Development

Business purpose. Runs the training lifecycle from request through delivery to assessment and reporting.

Key responsibilities. Training types, titles, cost categories and trainer directory; training requisitions; training planning with venue, mode, objectives, participants, trainers and costs; session scheduling and calendar; attendance tracking per session; post-training assessment and participant feedback; training dashboard, inventory, cost and diary reporting.

Business benefits. Training spend and participation are visible, effectiveness is measured, and development activity is documented against the employee record.

Related business areas. Employee management, performance management.

3.13 Asset Management

Business purpose. Tracks company assets from acquisition through assignment, maintenance and depreciation to disposal.

Key responsibilities. Item catalogue with categories and units; asset registration with acquisition value, warranty and identification code; asset requisition by employees with approval; assignment (by requisition or directly), acknowledgement, transfer and return; maintenance records and costs; periodic depreciation and book value; disposal; asset register and per-employee asset profile reporting.

Business benefits. The organization knows what it owns, who holds it, what it is worth and what it costs to maintain — and recovers assets reliably when employees leave.

Related business areas. Employee management, separation clearance, approval workflow.

3.14 Expense Management

Business purpose. Handles employee expense claims and temporary cash advances.

Key responsibilities. Expense types; expense applications; advance (IOU) requests and their subsequent adjustment; approval routing; expense reporting.

Business benefits. Claims are submitted, approved and reported through a controlled route rather than informally.

Related business areas. Approval workflow, payroll, employee self-service.

3.15 Approval Workflow

Business purpose. The shared, configurable engine through which every material employee transaction is authorized. It is the governance backbone of the solution.

Key responsibilities. Definition of approval routes per request type and per part of the organization; ordered or non-sequential approval stages; approver types including supervisor, line manager, dotted-line supervisor, user group and named individual; a consolidated pending-work dashboard for approvers; single and bulk approve or reject; administrator override; complete approval history; automatic notification of the next approver.

Coverage. Forty-four request types are routed through the engine, including leave, movement, attendance adjustment, overtime and overtime planning, shift change and exchange, remote and field attendance, salary generation, bonus, arrears, increment and increment proposal, advance salary, salary additions and deductions, salary certificates, loans and provident-fund loans, provident-fund withdrawal and profit share, security deposits and disbursements, expense claims and advances, asset requisitions, employee requisitions, transfers and promotions, profile changes, document and no-objection requests, separation, separation clearance and final settlement.

Business benefits. Every consequential change is authorized by the right person, recorded with a timestamp, and available for audit. Approval rules can be changed by configuration as the organization evolves.

Related business areas. Every transactional module, plus notifications and audit.

3.16 Administration, Configuration and Access Control

Business purpose. The configuration and governance layer: reference data, organizational setup, users, roles and access scope.

Key responsibilities. Master and reference data across the organization; employment, separation, loan, expense and document types; leave and movement types and policies; company policy documents with employee acknowledgement; bank and tax configuration; announcements; user accounts, user groups, roles and feature permissions; the scope of the organization each role may act on; notification categories and channels; delivery and activity monitoring.

Business benefits. The solution can be adapted to each organization's structure and policy without custom development, and access can be kept to the minimum each role requires.

Related business areas. All modules.

3.17 Workplace Services, Dashboards and Monitoring

Business purpose. A group of cross-cutting services that support day-to-day working life and give each audience a starting view of the information relevant to them.

Key responsibilities. Role-specific dashboards for employees, supervisors and management, plus a service-book view; task and project management; grievance submission and handling; a confidential whistleblower channel with configured recipients; an employee directory and contact book; a custom report builder with letter templates and letter generation; announcements; and monitoring of notification delivery and application activity.

Business benefits. Employees have a confidential route to raise concerns; managers and executives open the system to the information they actually need; teams coordinate work in the same place they manage people; and organizations can build their own reports and correspondence templates without waiting for new development.

Related business areas. Employee management, self-service, administration, notifications, reporting.

---

4. Feature Catalog

The tables below list the principal features available in each module. Features are described by what they achieve for the business.

4.1 Employee Management

Feature	Business purpose	Description	Business benefit	Typical users
Employee record	Maintain the master record for each person	Identity, employment, organizational placement, contact, education, experience and family details	Single trusted source of people data	HR officer, HR admin
Employee documents	Hold supporting documentation	Upload and retrieve certificates, identity documents and agreements against the employee	Documentation is complete and retrievable	HR officer
Identification profile	Record statutory and personal identifiers	National identity, birth registration, passport, tax and insurance reference numbers	Compliance and correct statutory treatment	HR officer, employee
Confirmation	Move employees from probation to permanent status	Track probation end, process confirmation and issue confirmation letters	Entitlements begin on the correct date	HR officer, manager
Transfer and promotion	Record organizational and grade movement	Effective-dated movement with approval and letter generation	Movements are authorized and auditable	HR officer, approver
Increment	Record pay revisions	Individual or bulk increments, including grade-based increments, with approval and letters	Pay revisions applied consistently and on time	Payroll officer, HR
Reward and punishment	Record recognition and disciplinary outcomes	Capture actions against the employee and generate the associated letters	Consistent, documented people decisions	HR officer, manager
Job description	Define and assign role expectations	Job description library, extension and assignment to employees	Clear role accountability	HR admin, manager
Employee identity card	Produce staff identity cards	Generate printable identity cards from employee data and photograph	Fast, consistent card issuance	HR officer
Letters and documents	Issue formal employment correspondence	Confirmation, transfer, promotion, increment and separation letters from templates	Professional, consistent correspondence	HR officer
Organogram	Visualize reporting structure	Display the organization's reporting hierarchy	Clarity of structure and span of control	Management, HR

Feature	Business purpose	Description	Business benefit	Typical users
Contact book	Locate colleagues	Directory of employees and contact details	Everyday productivity	All employees

4.2 Attendance and Time Management

Feature	Business purpose	Description	Business benefit	Typical users
Attendance capture	Record when people work	Collect clock events from time-recording devices, mobile and web	Removes manual registers	All employees
Roster setup and generation	Schedule who works when	Define rosters and generate monthly schedules across the workforce	Coverage is planned, not improvised	HR admin, manager
Calendar and holiday setup	Define non-working time	Holiday calendars, weekly offs, exception off-days and their assignment	Attendance and leave counted correctly	HR admin
Daily attendance processing	Turn raw events into a status	Reconcile events against shift and roster to produce a daily status	Reliable payroll input	System, HR
Attendance adjustment	Correct missing or wrong entries	Employee-raised correction request routed for approval	Errors corrected within policy, not informally	Employee, manager
Overtime entry and planning	Manage work beyond schedule	Record, plan and review overtime with approval	Overtime controlled and correctly paid	Employee, manager
Remote and field attendance	Support work away from the workplace	Location-based attendance, market visits and device registration with approval	Field and remote work is measurable	Field staff, manager
Shift change and exchange	Handle schedule variation	Requests to change or swap shifts, routed for approval	Operational flexibility with control	Employee, manager
Late and absence penalties	Apply attendance discipline	Configured penalties applied through payroll	Consistent, policy-based discipline	HR, payroll
Flexible timesheet	Support non-standard working patterns	Bulk timesheet entry and processing for flexible arrangements	Accommodates varied work models	HR admin
Extra side duty	Record additional duty	Capture duty performed beyond the normal assignment	Additional effort is recognized	Manager, HR

4.3 Leave and Movement

Feature	Business purpose	Description	Business benefit	Typical users
Leave types and policies	Define what leave exists and its rules	Configure leave categories, entitlement, accrual method and eligibility	Policy applied uniformly	HR admin
Leave balance generation	Maintain entitlement balances	Automatic scheduled, monthly-incremental and calculative balance generation	Balances always current	System, HR
Leave application	Request time off	Apply for leave with dates and type; validated against balance and policy	Fewer rejected or invalid requests	Employee
Leave approval	Authorize time off	Route to the configured approvers with full history	Coverage protected, decisions recorded	Manager, HR
Leave encashment	Convert unused leave to pay	Request and approve encashment of eligible balances	Recognized entitlement, paid correctly	Employee, HR, payroll
Movement application	Record official absence from the workplace	Apply for and approve official duty movement	Attendance not penalized for official duty	Employee, manager
Leave policy auto-renewal	Handle cycle rollover	Renew policies and carry balances into the new cycle	No manual year-end rework	HR admin
Bridge leave handling	Handle leave adjoining holidays	Apply configured treatment where leave adjoins holidays or off-days	Policy applied consistently	System, HR

4.4 Payroll and Tax

Feature	Business purpose	Description	Business benefit	Typical users
Payroll element and rule setup	Define the shape of pay	Configure earning and deduction elements and their calculation rules	Pay structures reflect actual policy	Payroll admin
Payroll group and pay frequency	Group employees for processing	Define processing groups and their pay calendars	Orderly, segmented processing	Payroll admin
Salary assignment	Set each employee's pay	Assign salary structure individually, in bulk, or by grade	Accurate starting point for every run	Payroll officer
Monthly salary generation	Produce the payroll	Generate salaries for a group, month and year from all inputs	Fast, repeatable monthly close	Payroll officer
Arrear processing	Handle retroactive pay	Generate arrears where changes take effect in a past period	Back-pay handled correctly	Payroll officer

Feature	Business purpose	Description	Business benefit	Typical users
Bonus generation	Pay bonuses	Configure and generate bonus runs with approval	Bonuses paid accurately and on time	Payroll officer
Advance salary	Provide early access to pay	Request, approve and recover advance salary	Employee support with controlled recovery	Employee, payroll
Income tax	Meet tax obligations	Tax deduction, challan configuration, tax certificates and full-year tax reporting	Statutory compliance from payroll data	Payroll, finance
Payslip	Inform employees	Individual and bulk payslips, including cash-payment formats	Transparency and fewer pay queries	Employee, payroll
Salary certificate	Support employee needs	Approved salary certificates for banks and third parties	Fast response to employee requests	Employee, HR
Bank advice and disbursement	Pay employees	Bank instruction files in multiple bank-specific formats, plus cash payment sheets	Timely, error-free disbursement	Payroll, finance
Salary reconciliation	Verify the run	Compare and reconcile the payroll before release	Errors caught before payment	Payroll officer

4.5 Loan and Financial Aid

Feature	Business purpose	Description	Business benefit	Typical users
Loan request	Apply for a cash loan	Amount, instalments, interest, guarantor and closing date	Governed access to financial support	Employee
Loan approval	Authorize lending	Approval route with recorded approved amount and instalments	Lending within policy and affordability	Approver, HR
Loan schedule and reschedule	Plan and adjust repayment	Instalment schedules, rescheduling and holding of instalments	Flexibility when circumstances change	HR, payroll
Provident-fund loan	Borrow against own fund balance	Eligibility calculation and full repayment schedule	Access to own savings without external borrowing	Employee, fund admin
Early settlement	Close a loan ahead of schedule	Settle outstanding principal and interest, with optional concession	Clean closure, reduced administration	Employee, fund admin
Payroll recovery	Collect instalments	Due instalments deducted automatically in the monthly run	No manual tracking or chasing	System, payroll

Feature	Business purpose	Description	Business benefit	Typical users
Loan reporting	Monitor lending	Loan history, per-loan detail and fund-loan lifecycle reports	Visibility of exposure and recovery	Finance, HR

4.6 Benefits Management

Feature	Business purpose	Description	Business benefit	Typical users
Provident-fund policy	Define fund rules	Eligibility basis, contribution percentages and assignment	Consistent, policy-based fund administration	Fund admin
Member ledger	Track member balances	Contributions, withdrawals and earnings per member and period	Members and administrators see true balances	Fund admin, employee
Fund investment	Grow the fund	Record investments, instruments, returns, maturity and collections	Fund performance is documented	Fund admin, finance
Profit distribution	Share investment returns	Distribute earned profit to member balances, with approval	Transparent, authorized distribution	Fund admin, approver
Gratuity policy	Define end-of-service benefit	Service-length bands and disbursement basis by employment type	Predictable, policy-based settlement	HR, fund admin
Cafeteria management	Run staff catering	Pricing by designation, company and employee contribution, meal entry and consumption reporting	Controlled subsidy and clear cost visibility	HR admin, employee
Security deposits	Manage employee deposits	Deposit types, collection and disbursement with approval	Deposits held and returned accountably	HR, finance
Fund reporting	Report on funds	Investment reports, employee-wise fund detail and annual member statements	Governance and member confidence	Fund admin, finance

4.7 Retirement, Separation and Final Settlement

Feature	Business purpose	Description	Business benefit	Typical users
Separation types and policy	Define how exits are handled	Configure separation categories and notice policy	Consistent treatment of exits	HR admin
Separation application	Initiate an exit	Record resignation or termination with reason and dates, routed for approval	Exits are authorized and dated	Employee, HR, approver

Feature	Business purpose	Description	Business benefit	Typical users
Last-working-day calculation	Determine the exit date	Derive the last working day from the policy	Correct basis for pay and entitlement	HR
Separation clearance	Confirm nothing is outstanding	Departmental clearance covering assets and dues	No unrecovered assets or advances	HR, department heads
Gratuity calculation	Calculate the service benefit	Apply the gratuity policy band to service length	Correct, policy-based entitlement	HR, payroll
Provident-fund settlement	Release the member balance	Settle the employee's fund position on exit	Timely, accurate release of savings	Fund admin
Final settlement	Produce the closing figure	Consolidate dues, overtime, leave encashment, gratuity and fund against loans, penalties and tax	One complete, defensible settlement	Payroll, HR, finance
Exit interview	Capture leaver feedback	Structured questionnaire at exit	Insight into attrition drivers	HR

4.8 Asset Management

Feature	Business purpose	Description	Business benefit	Typical users
Item catalogue	Define asset types	Categories, sub-categories, units and item definitions	Consistent asset classification	Asset officer
Asset registration	Record owned assets	Acquisition value, warranty, depreciation rate and identification code	Complete asset register	Asset officer
Identification code	Identify assets quickly	Scannable code linked to an asset detail page	Fast verification and stock-taking	Asset officer
Asset requisition	Request equipment	Employee request routed for approval	Governed allocation of equipment	Employee, approver
Assignment and acknowledgement	Issue assets	Assign against a requisition or directly, with employee acknowledgement	Clear custody and accountability	Asset officer, employee
Transfer and return	Move assets between holders	Transfer between employees or release back to stock	Accurate custody at all times	Asset officer
Maintenance	Keep assets serviceable	Record maintenance jobs, providers, costs and return to service	Controlled maintenance spend	Asset officer
Depreciation	Value assets over time	Calculate and post periodic depreciation and book value	Accurate asset valuation	Finance, asset officer

Feature	Business purpose	Description	Business benefit	Typical users
Disposal	Retire assets	Record sale or write-off with amount and disposal type	Clean, documented retirement	Finance, asset officer
Asset reporting	Monitor the estate	Register, detail, depreciation and per-employee asset reports	Full visibility of the asset base	Management, finance

4.9 Performance Management

Feature	Business purpose	Description	Business benefit	Typical users
Objective and indicator catalogue	Define what is measured	Hierarchical objectives and performance indicators with measurement basis	Measurement aligned to strategy	HR, management
Indicator mapping	Assign measures	Map indicators to employees, departments, designations or business units	Everyone knows what they are measured on	HR, manager
Target setting	Agree the standard	Annual targets with weighting, frequency and benchmark	Fair, agreed expectations	Manager, employee
Achievement entry and scorecard	Record and view results	Enter actual achievement against target; view individual scorecards	Continuous visibility of performance	Employee, manager
Evaluation criteria and scales	Define how scores are formed	Criteria, weighting between measured results and behaviours, and score bands	Balanced, transparent evaluation	HR admin
Evaluation routing	Decide who evaluates whom	Stakeholder types with score weightings per position group	Multi-perspective assessment	HR admin
Assessment timeline	Control the review window	Open and close assessment periods with activity log	Reviews happen on schedule	HR admin
Behavioural assessment	Assess how work is done	Questionnaire-based behavioural rating by self and supervisor	Behaviour assessed alongside results	Employee, supervisor
Values and competency assessment	Assess capability	Desired versus demonstrated values and competencies	Clear development gaps	Employee, supervisor, HR
Appraisal grading	Convert scores to outcomes	Score bands mapped to grades and appraisal percentages	Consistent appraisal outcomes	HR, management
Coaching tools	Support development	Johari window, GROW model, work plans, action plans and individual development plans	Structured development conversations	Manager, employee
Performance analytics	Review the picture	Indicator charts, yearly performance, appraisal reports and talent grid views	Informed talent decisions	Management, HR

4.10 Training and Development

Feature	Business purpose	Description	Business benefit	Typical users
Training master data	Define the training catalogue	Types, titles, cost categories, and internal and external trainers	Reusable, consistent catalogue	Training admin
Training requisition	Request training	Request with type, reason and objectives, linked to planned events	Demand-driven training planning	Employee, manager
Training planning	Organize a training event	Mode, organizer, venue, objectives, dates, participants, trainers and costs	Well-organized, costed events	Training admin
Session scheduling	Set the timetable	Session dates and times with calendar view	Clear scheduling and attendance planning	Training admin
Attendance tracking	Confirm participation	Mark attendance per session, individually or in bulk	Verified participation records	Training admin
Assessment and feedback	Measure effectiveness	Post-training assessment and participant feedback	Evidence of training value	Participant, admin
Training analytics	Report on training	Dashboard, inventory, cost and training-diary reporting	Justifiable training investment	Management, HR

4.11 Employee Self-Service

Feature	Business purpose	Description	Business benefit	Typical users
About me	Maintain own profile	View and request updates to own personal information, with approval	Accurate data, less HR data entry	Employee
My requests	Transact independently	Leave, movement, attendance adjustment, overtime, loan, expense and asset requests	Faster service, lower HR load	Employee
My records	See own information	Payslips, leave balances, attendance, loan history, asset holdings and rewards	Transparency and trust	Employee
My documents	Obtain formal documents	Request salary certificates, no-objection letters and other documents	Fast turnaround on routine requests	Employee
Approvals inbox	Act on team requests	Consolidated view of everything awaiting the user's decision	Nothing waits unnoticed	Manager
Notifications	Stay informed	In-application, mobile, e-mail and message alerts on request activity	Timely action, fewer delays	All users

4.12 Administration and Access Control

Feature	Business purpose	Description	Business benefit	Typical users
Organizational setup	Model the organization	Business units, workplaces, departments, sections, designations, positions and grades	The system matches the real organization	HR admin
Reference data	Maintain standard lists	Employment, separation, loan, expense and document types; geographic and demographic lists	Consistent, controlled data entry	HR admin
Approval route configuration	Define governance	Approval stages per request type and organizational scope	Governance adapts without development	HR admin
User and role management	Control access	Users, user groups, roles, feature permissions and role extension	Least-privilege access	System admin
Access scope	Limit reach	Restrict each role to defined business units, workplace groups and workplaces	Managers see only their population	System admin
Policy documents	Publish policy	Upload and categorize company policies with employee acknowledgement	Demonstrable policy communication	HR admin, employee
Announcements	Communicate	Publish announcements to a business unit	Consistent internal communication	HR admin
Notification configuration	Control communication	Choose which notification categories go out over which channel	Relevant alerts, less noise	System admin
Activity monitoring	Verify delivery	Monitor notification delivery and application activity logs	Confidence that alerts reached people	System admin

4.13 Workplace Services, Dashboards and Monitoring

Feature	Business purpose	Description	Business benefit	Typical users
Employee dashboard	Give each employee a starting point	Personal summary of pending items, balances and announcements	Faster daily use, fewer missed actions	Employee
Supervisor dashboard	Focus a manager on their team	Team attendance, pending approvals and exceptions in one view	Managers act on what matters first	Manager
Management dashboard	Support executive oversight	Configurable summary of workforce and cost indicators	Informed direction without report-chasing	Management
Service book	Consolidate an employee's service record	Chronological view of an individual's employment history	Quick answers on tenure and history	HR, management

Feature	Business purpose	Description	Business benefit	Typical users
Task and project management	Coordinate work	Task boards and projects alongside people management	Work and people managed in one place	All users
Grievance	Give employees a formal route to raise issues	Submit and track a grievance through to resolution	Issues surface and are handled, not buried	Employee, HR
Whistleblower channel	Enable confidential reporting	Confidential submission routed to configured recipients	Governance and early risk detection	Employee, management
Employee directory and contact book	Help people find colleagues	Searchable directory of employees and contact details	Everyday productivity	All employees
Custom report builder	Meet reporting needs without development	Build reports beyond the standard set	Self-sufficiency in reporting	HR admin, management
Letter configuration and generation	Standardize correspondence	Define letter templates and generate them against employee data	Consistent, fast correspondence	HR
Announcements	Communicate to the workforce	Publish announcements to a business unit	Reliable internal communication	HR admin
Notification and activity monitoring	Confirm communication worked	Monitor delivery of notifications and application activity	Confidence that alerts reached people	System admin

5. Business Rules

The following rules govern the solution's behaviour. Rules marked as configurable are set per organization during implementation.

Access and governance

1. Access is granted through roles, never to individuals directly.
2. What a user may do is the combination of a permission and a scope — a manager may approve, but only for their own population.
3. Each role is limited to a defined part of the organization (business unit, workplace group and workplace).
4. Users cannot act in the system once their organization's subscription has expired or been suspended.
5. All access and activity is scoped to the user's own organization; organizations cannot see one another's data.
6. Sensitive information, including salary, is treated as restricted and is stored in protected form.

Approvals

7. Material transactions take effect only after their approval route has completed without rejection.

8. If no approval route is configured for a request type in a given part of the organization, the request is automatically approved.
9. Approval stages progress in the configured sequence; only the current stage may act.
10. Administrators may act on a stage outside the normal route, and such action is recorded separately.
11. Every approval and rejection is retained in an immutable history against the application.
12. Each stage activation notifies the next approver.

Employee lifecycle

13. The employee identifier is unique and does not change once assigned.
14. An active employee has one primary reporting manager; an employee cannot report to themselves.
15. Joining and confirmation dates start the clocks for service-based entitlements such as gratuity and earned leave.
16. Employment type and payroll group determine which pay and entitlement rules apply to an employee.
17. Records are deactivated rather than deleted, and historical versions are retained.
18. Organizational and compensation changes are effective-dated so that history remains accurate.
19. A separation date ends self-service access and triggers final settlement and clearance.
20. New employees cannot be created beyond the organization's subscribed employee limit.

Attendance and time

21. A day's attendance status is derived from recorded clock events evaluated against the assigned shift and roster, then overlaid with approved leave and holidays.
22. An arrival within the configured grace period is not treated as late.
23. Half-day status is triggered by the worked-hours or arrival-time thresholds defined on the shift.
24. A missing clock event produces an incomplete day that requires correction or manager action.
25. Overtime requires approval and may be subject to configured limits.
26. Night shifts crossing midnight are attributed to the shift's business date, not the calendar date of each event.
27. Attendance corrections are subject to a cut-off window and an approval route.

Leave

28. Leave eligibility may depend on employment type, grade, length of service, confirmation status and gender.
29. Requests are validated against the available balance; the portion beyond balance becomes unpaid leave.
30. Overlapping leave requests for the same dates are rejected.
31. Balances are recalculated whenever leave accrues, is carried forward, is encashed or is cancelled.
32. Leave balances are generated automatically on a scheduled basis according to the policy's accrual method.
33. Approved leave marks the corresponding attendance days as leave.

Payroll

34. The base salary component drives derived components according to the configured rules.
35. Unpaid absence reduces pay using the divisor defined by the applicable policy — it is not a fixed assumption.
36. Attendance, approved leave, overtime, penalties, loan instalments and statutory deductions are all inputs to the monthly run.
37. A payroll run is scoped to one organization, month, year and processing group.
38. Once a run is finalized its inputs are frozen; later corrections are made as arrears in a subsequent run.

39. Employees joining or leaving mid-period are paid on a pro-rated basis.
40. Salary generation and bonus generation are themselves subject to approval.
41. Every run must be reproducible and auditable.

Loans and funds

42. An employee may hold only one active provident-fund loan at a time.
43. The borrowable amount against the provident fund is the member's contributions and share of returns, less the outstanding principal of existing fund loans.
44. Loan instalments are recovered automatically in the monthly payroll run.
45. Early settlement must be less than the total outstanding instalment value.
46. Outstanding loan balances are recovered from the final settlement on exit.
47. Provident-fund profit distribution requires approval before it is applied to member balances.

Assets

48. Items that are already assigned cannot be edited or removed without releasing them first.
49. An asset must be free before it can be assigned; assignment, maintenance and disposal each change its availability.
50. Asset current value is the book value less accumulated depreciation.
51. Asset holdings are checked during separation clearance.

Data integrity

52. Approved and completed transactions are retained as history rather than overwritten.
53. Every business record belongs to exactly one organization.
54. Reference data changes apply organization-wide and take effect immediately for new transactions.

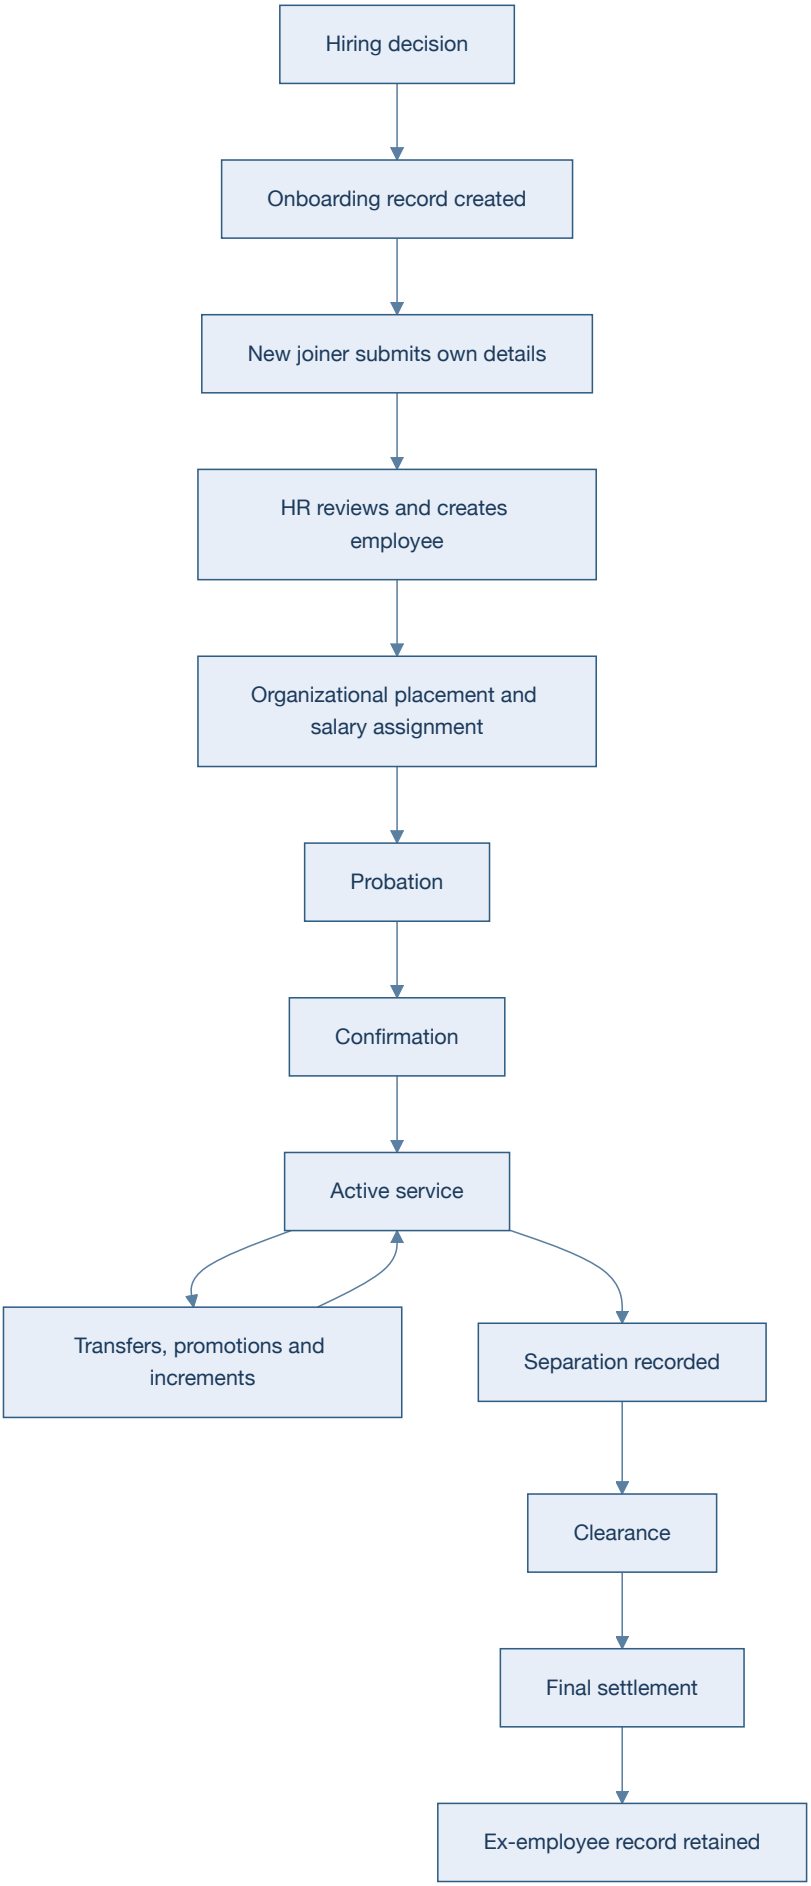

---

6. Business Process Workflows

This section describes the major end-to-end processes the solution supports.

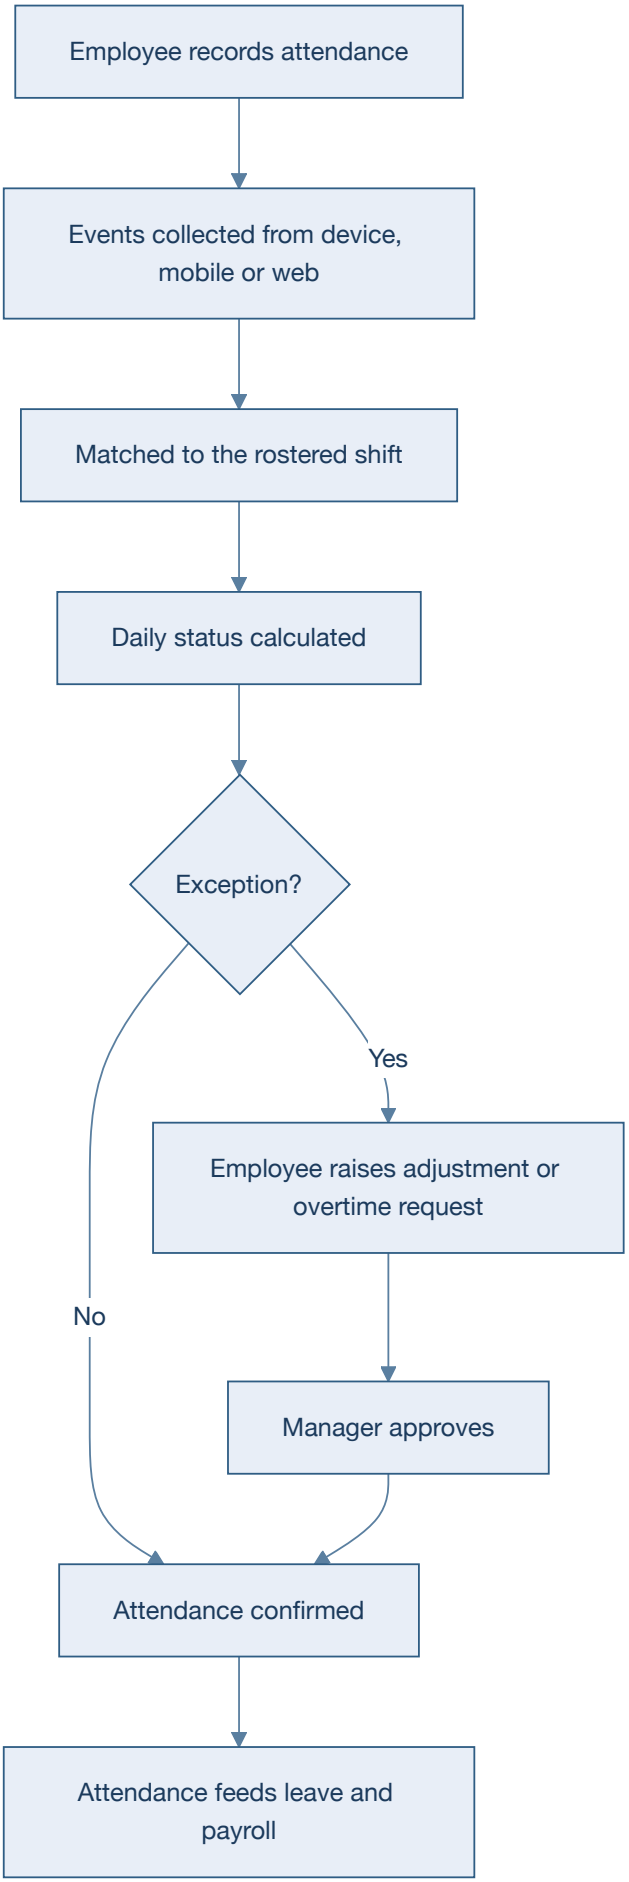

6.1 Employee lifecycle

From hire to exit, each stage hands over to the next with the employee record as the constant.

Hiring decision
Onboarding record created
New joiner submits own details
HR reviews and creates employee
Organizational placement and salary assignment
Probation
Confirmation
Active service
Transfers, promotions and increments
Separation recorded
Clearance
Final settlement
Ex-employee record retained

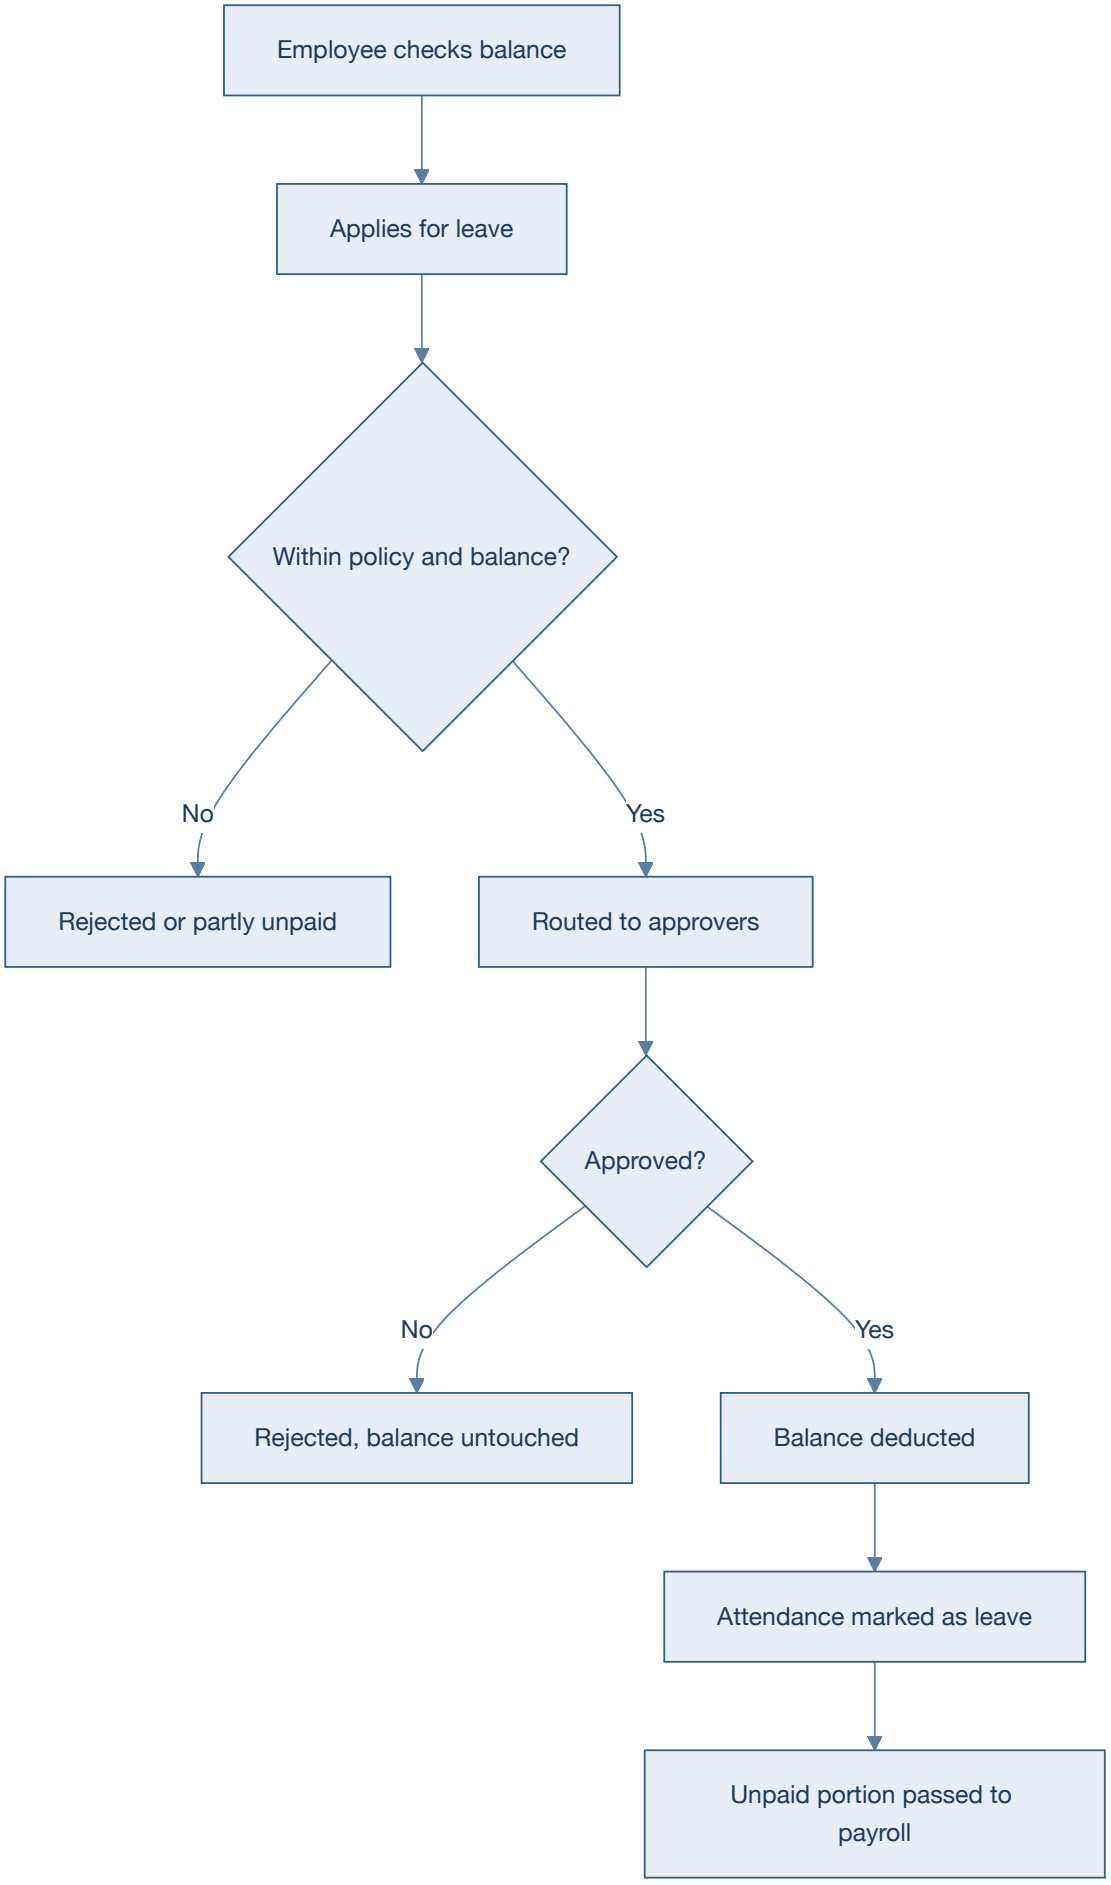

Business notes. Joining and confirmation dates begin service-based entitlements. Every movement is effective-dated and approved, so history remains accurate and pay changes flow into the correct period.

6.2 Attendance process

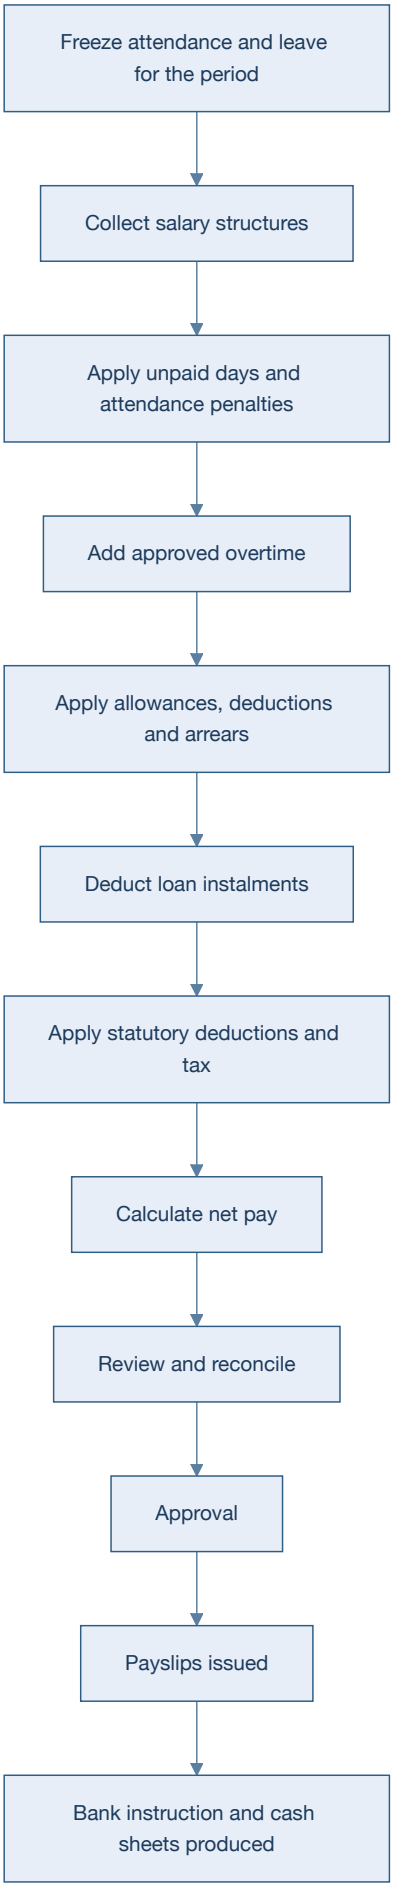

Business notes. Attendance is processed continuously rather than at month end, so exceptions surface while they can still be corrected easily. Rosters are generated automatically at the start of each month.

6.3 Leave management

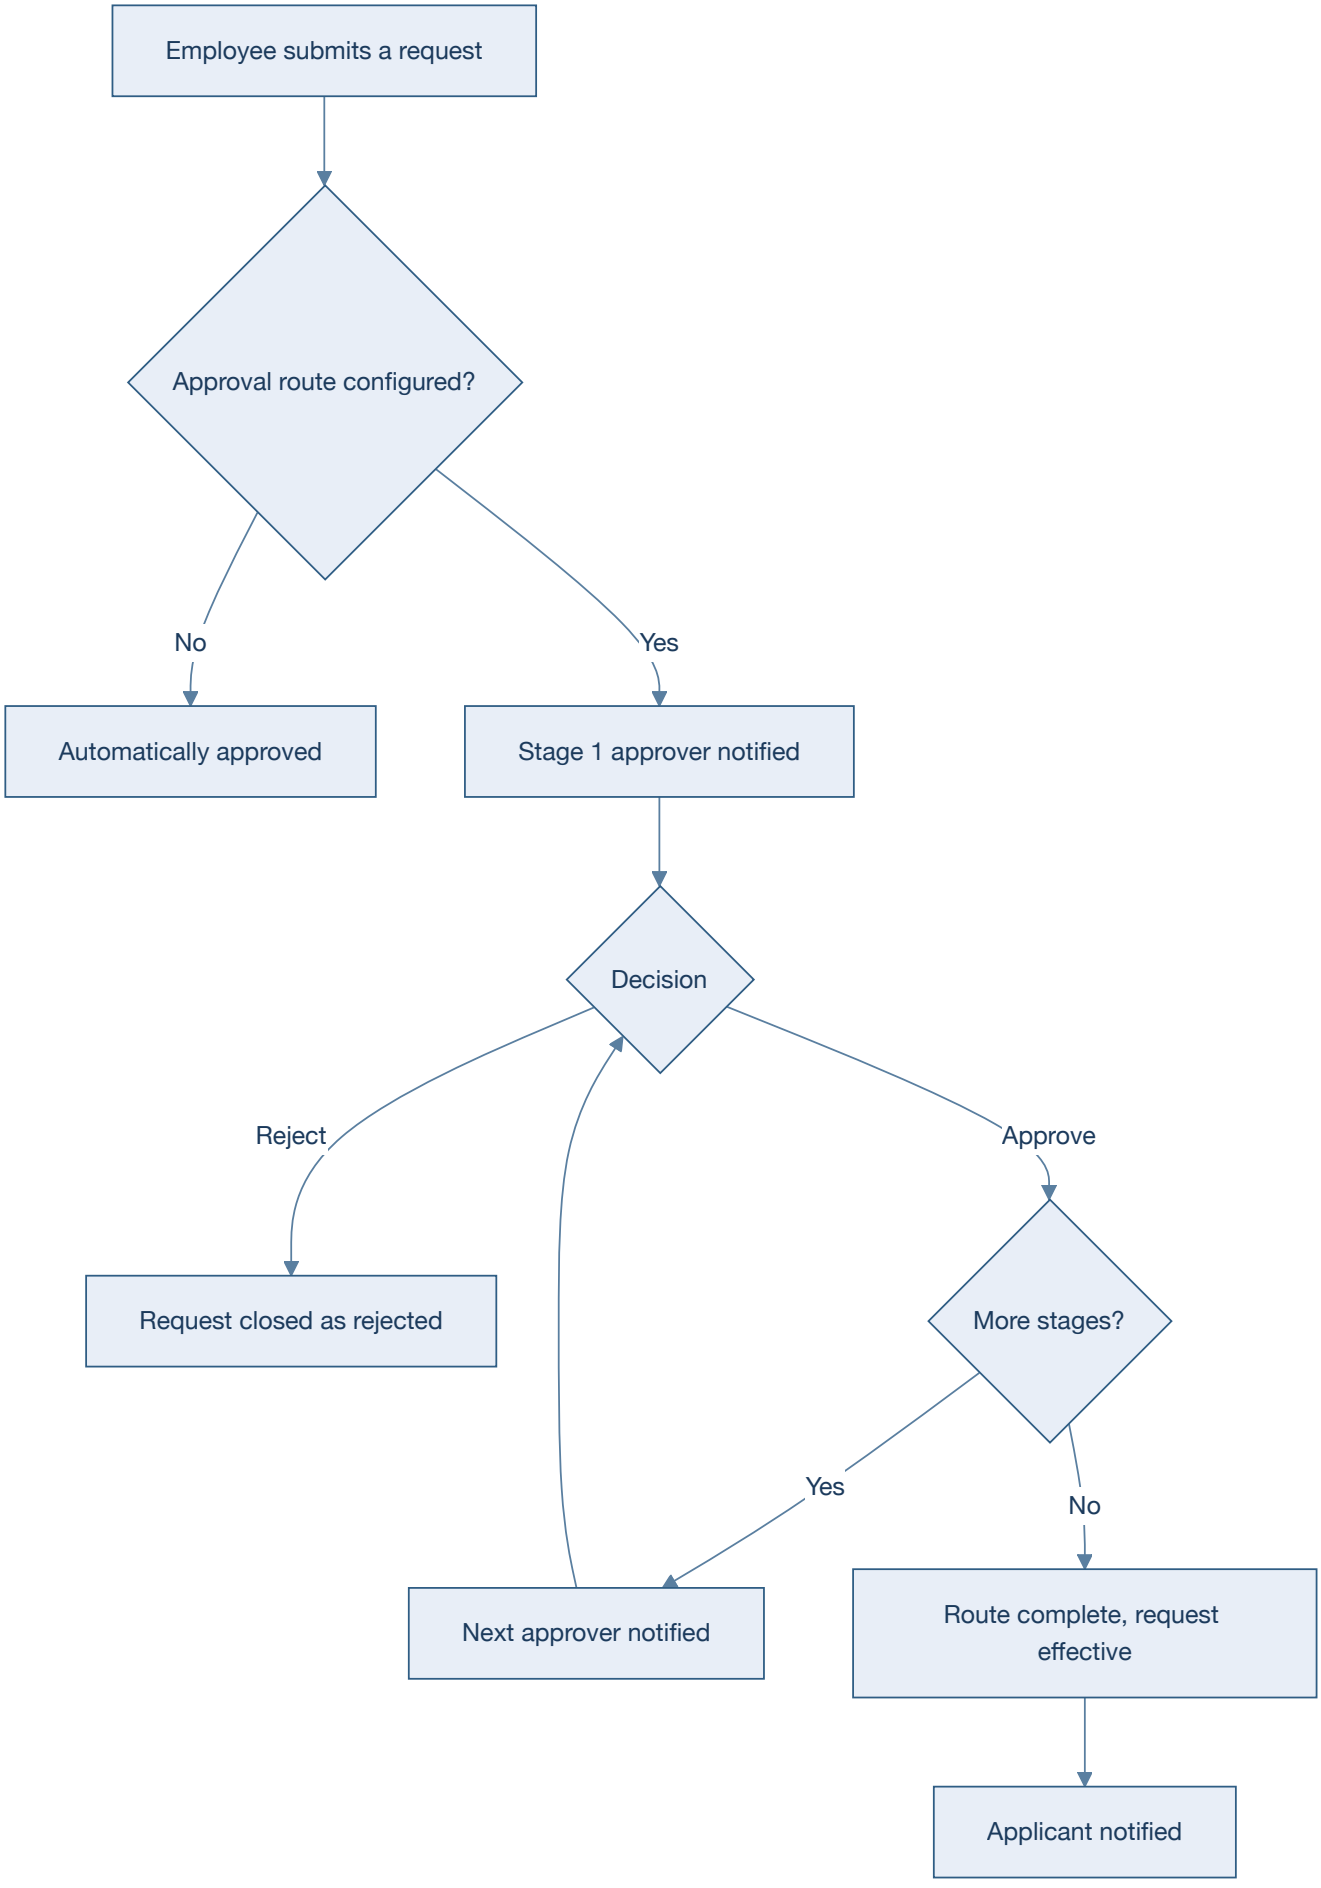

Business notes. Balances are maintained automatically by scheduled accrual. Cancellation restores the balance and reverses the attendance marking.

6.4 Monthly payroll processing

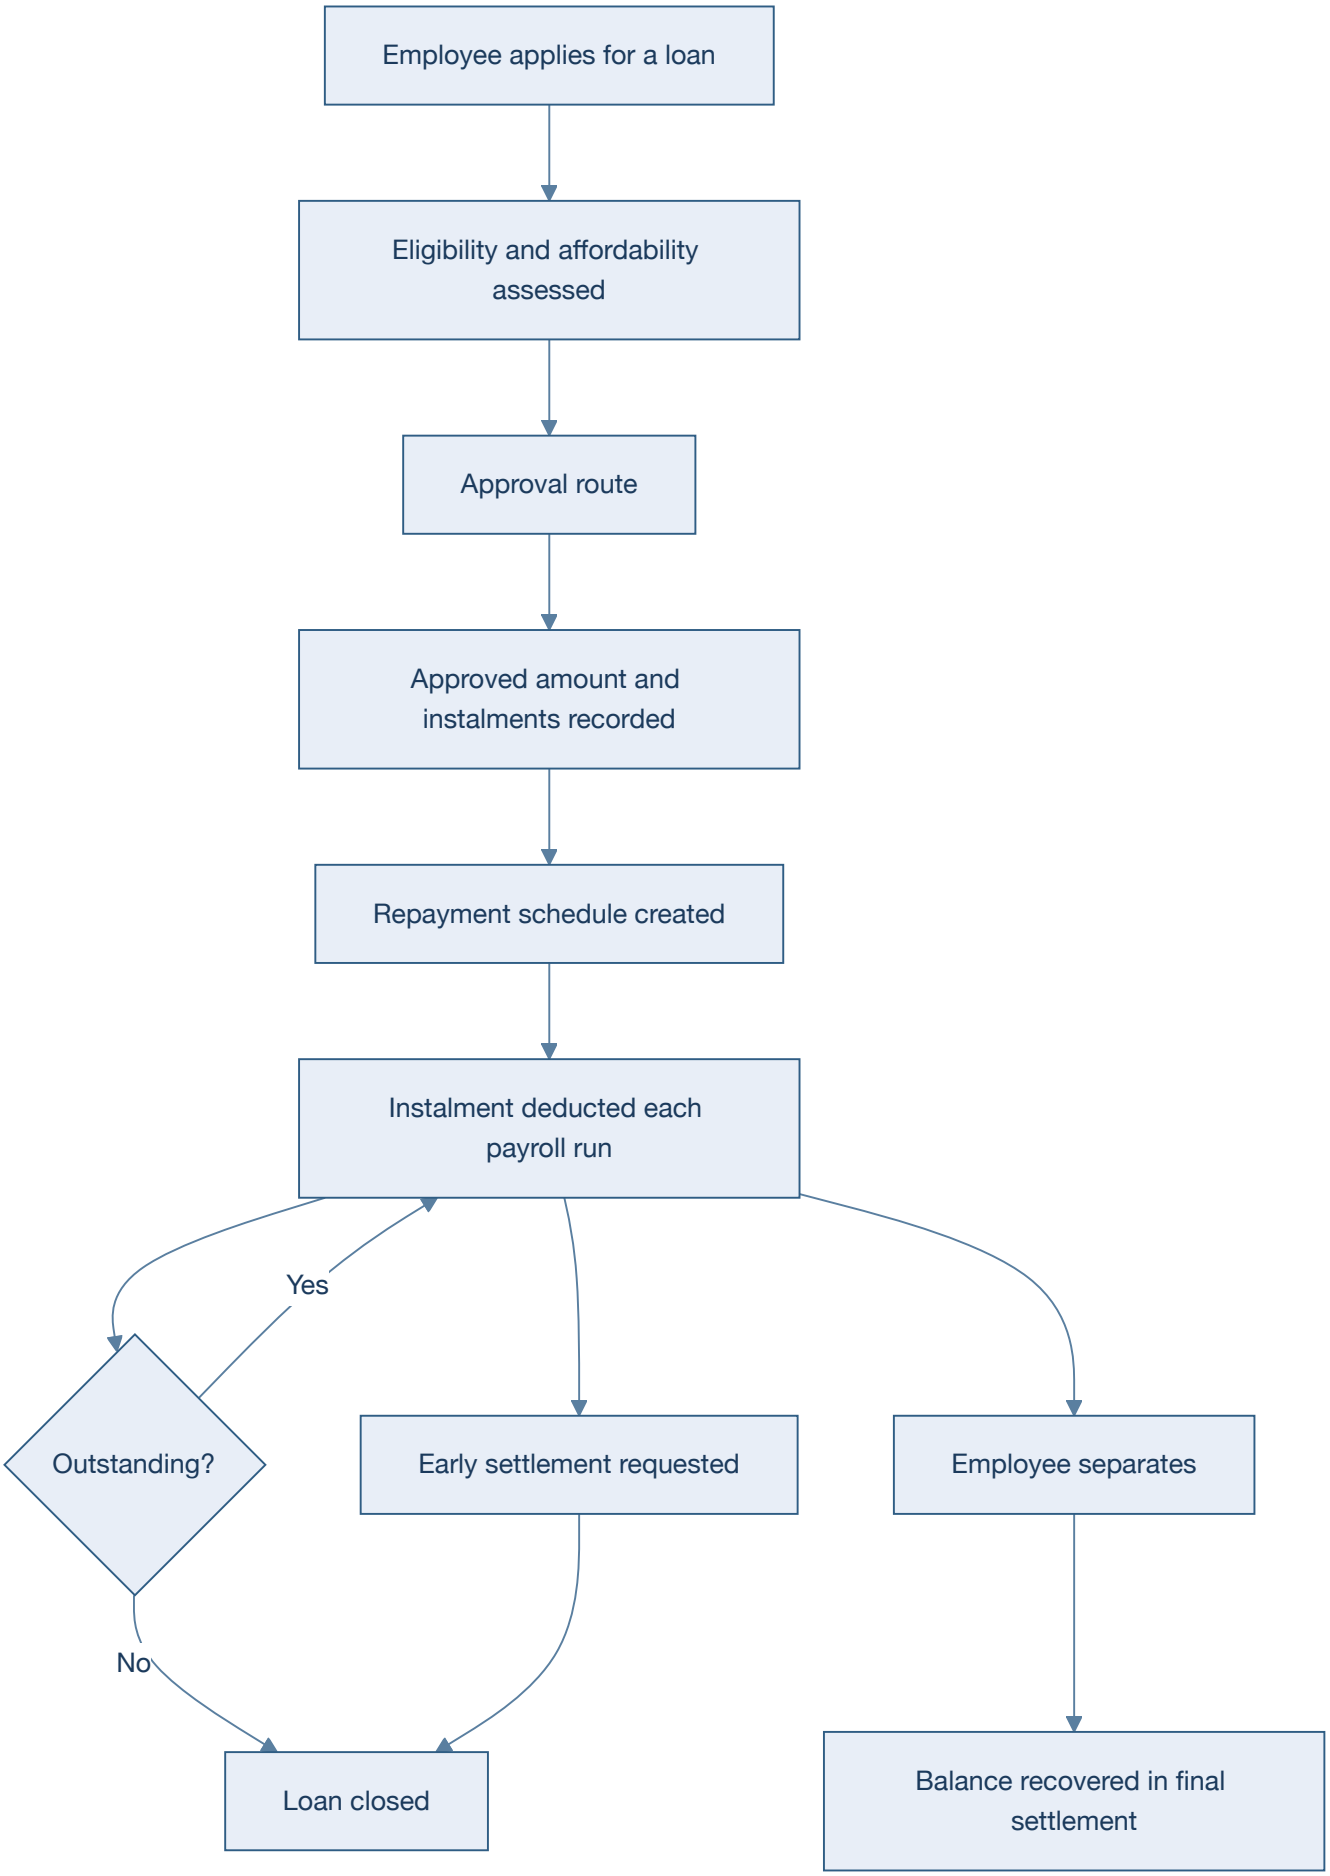

Business notes. The run is requested for a month, year and processing group, then processed automatically in the background. Because the run consumes attendance, leave, overtime, loans and tax rules, a change in any of those areas can move net pay — which is why the run is reviewed and approved before release.

6.5 Approval process

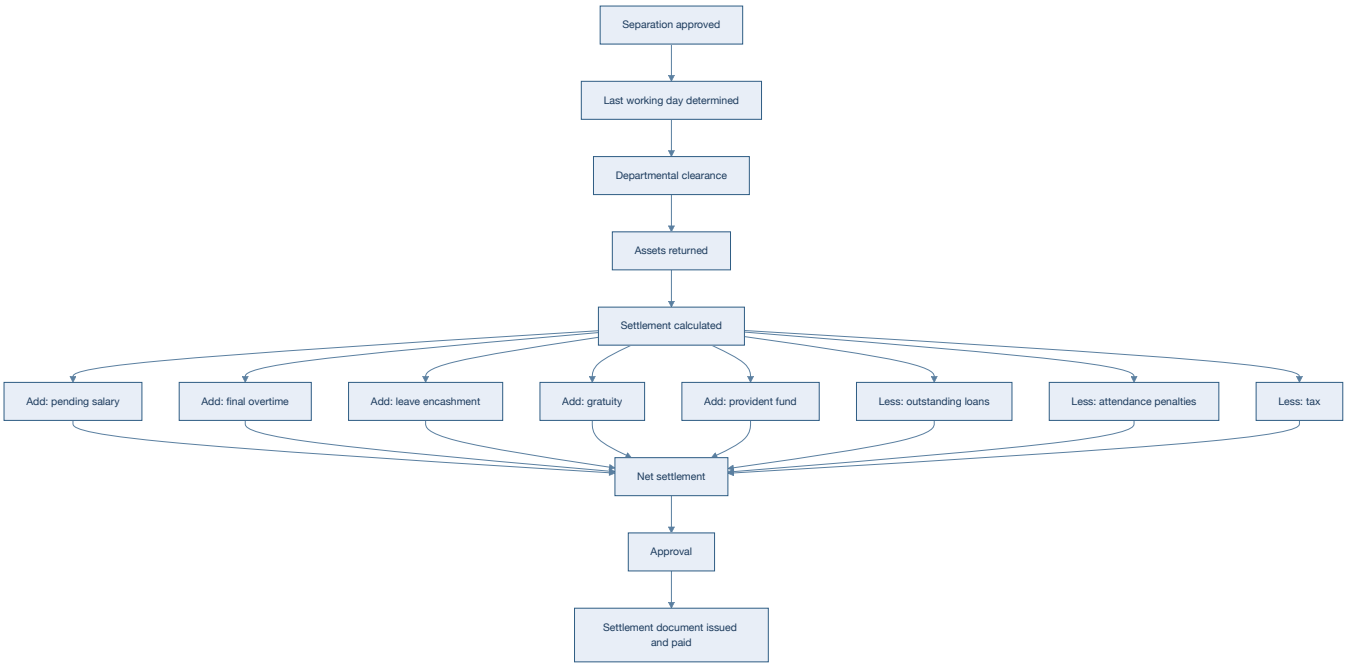

Business notes. The same engine serves all forty-four routed request types, so approval behaves identically whether the request is a day of leave or a final settlement. Approvers see all their pending work in one place and can act individually or in bulk.

6.6 Loan lifecycle

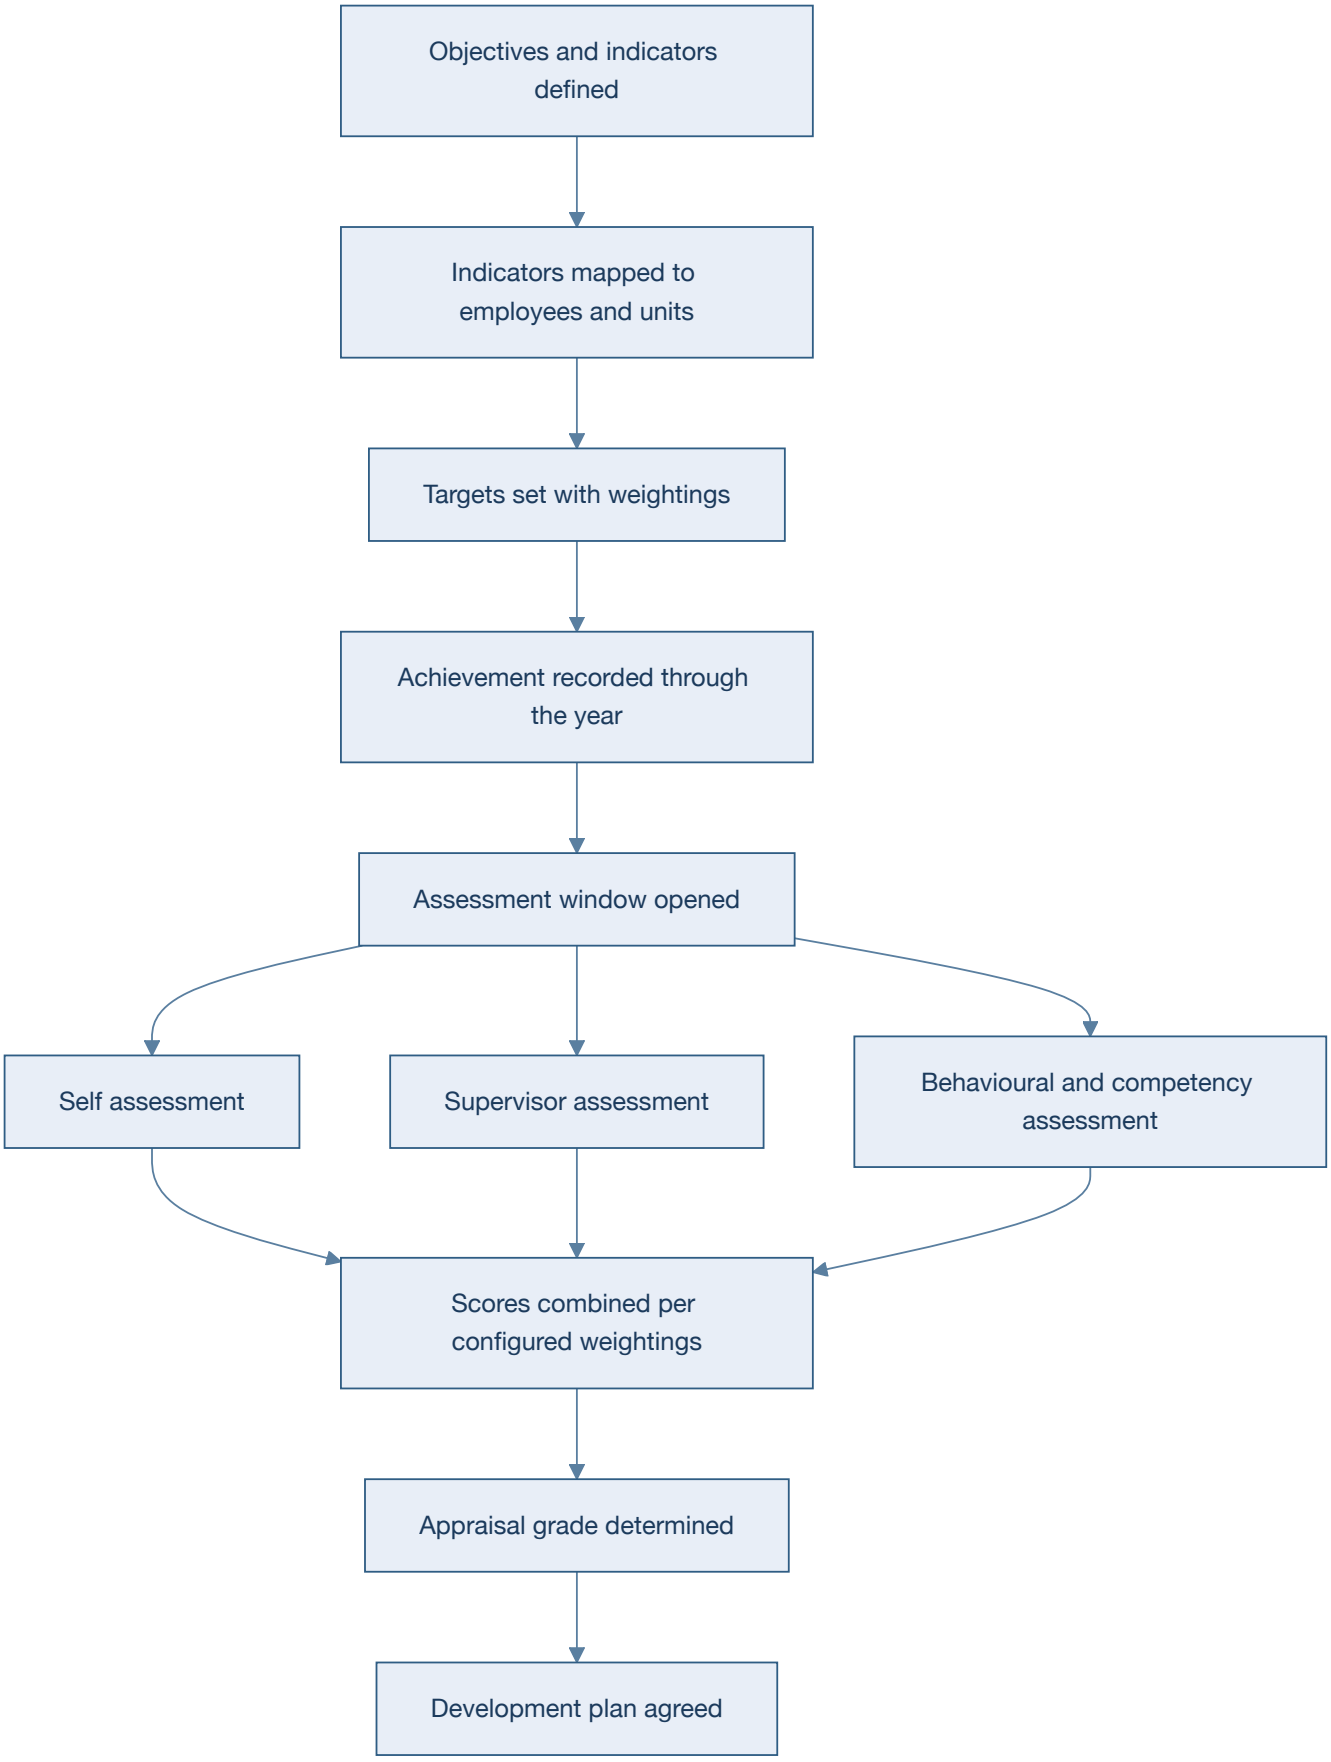

6.7 Final settlement

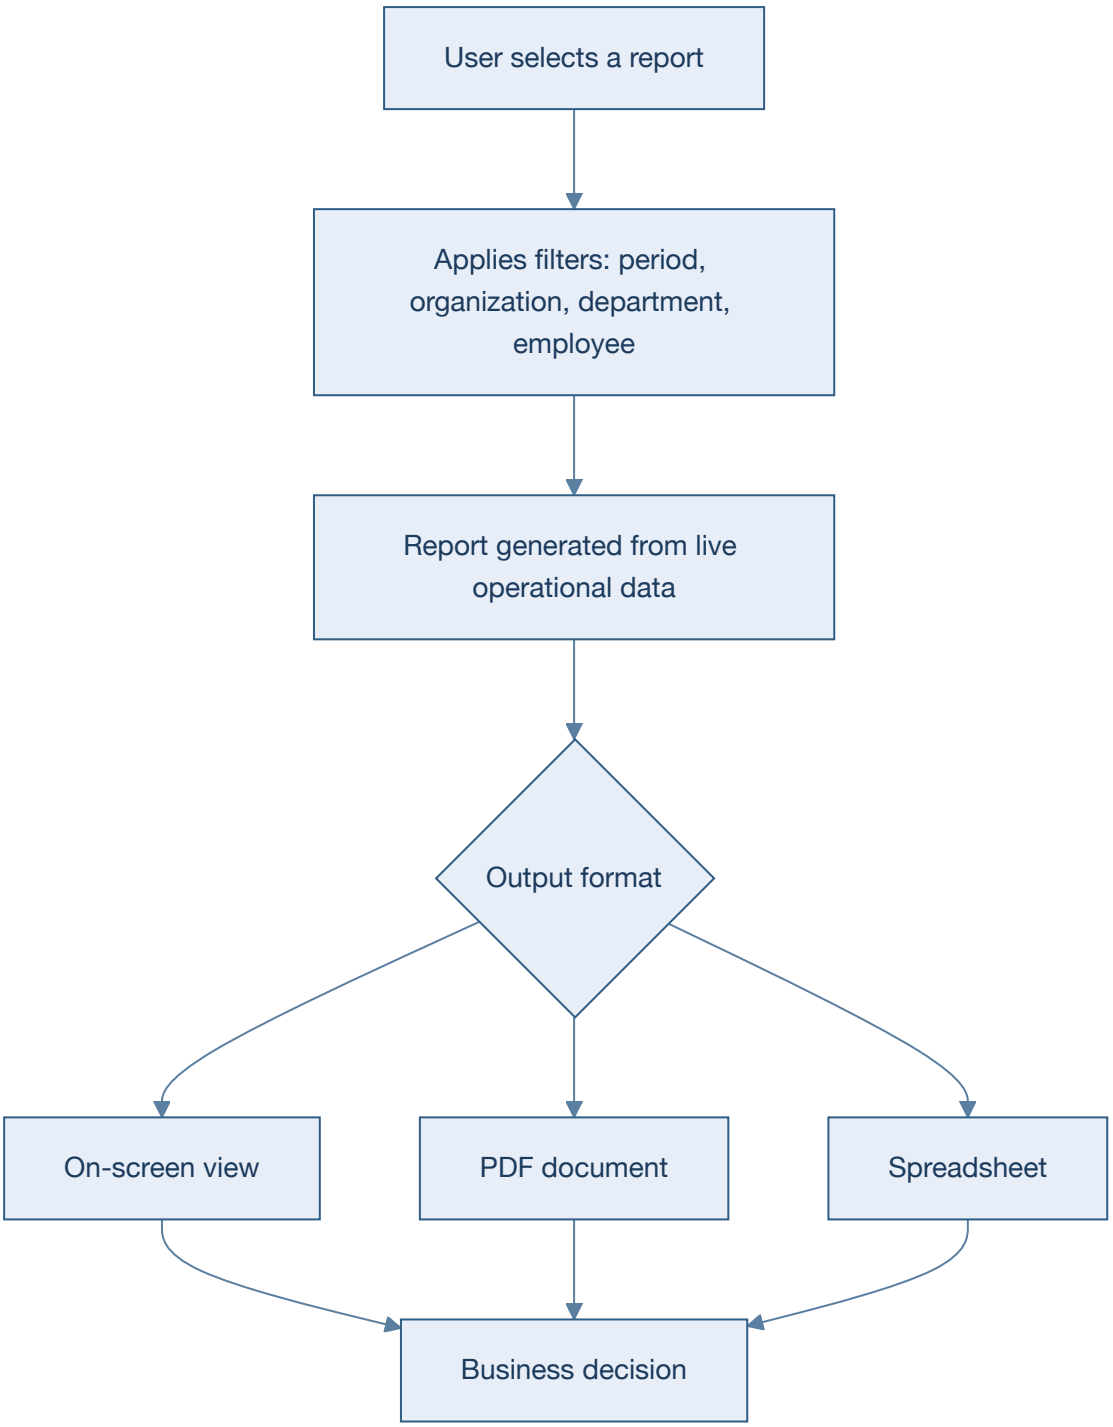

Business notes. This is the most cross-functional process in the solution, drawing balances from payroll, attendance, leave, loans and benefits into a single figure supported by a printable settlement statement.

6.8 Performance management cycle

6.9 Reporting process

7. User Journey

7.1 An employee's day

1. **Sign in.** The employee signs in to the web application or mobile app. Where the organization has enabled it, sign-in can be confirmed with a one-time code.
2. **Land on the overview.** The home view shows current status: pending requests, notifications, announcements and upcoming holidays.

3. **Record attendance.** The employee clocks in — at a workplace device, or from mobile where location-based attendance is permitted for their role.
4. **Handle exceptions.** If yesterday's attendance shows a missing entry, the employee raises an adjustment request; it goes to their manager automatically.
5. **Apply for leave.** The employee checks their balance, selects a leave type and dates, and submits. The system validates the request against balance and policy before it is routed.
6. **Request support.** During the month the employee may request a loan, submit an expense claim, request an asset, or ask for a salary certificate — each through the same self-service area, each routed for approval.
7. **Stay informed.** Approvals, rejections and reminders arrive as in-application alerts and mobile notifications.
8. **Review pay.** After the monthly run, the payslip becomes available in self-service alongside leave balances, attendance history and loan status.
9. **Participate in performance.** During the assessment window the employee records achievements against targets, completes a self assessment, and agrees a development plan with their manager.

7.2 A manager's day

1. **Sign in and open the approvals inbox**, which shows everything awaiting a decision, grouped by request type.
2. **Review team attendance** — who is present, late, absent or on leave today.
3. **Act on requests** — approve or reject leave, attendance corrections, overtime, expenses and asset requests, individually or in bulk.
4. **Plan coverage** using the team leave calendar and roster before approving further absence.
5. **Manage performance** — set and revise targets, validate achievements, complete supervisor assessments and record coaching conversations.

7.3 An HR or payroll professional's month

1. **Maintain people data** — process joiners, confirmations, movements and separations as they arise.
2. **Monitor time** — review attendance exceptions, pending adjustments and overtime through the month.
3. **Close the period** — confirm attendance and leave are settled for the payroll month.
4. **Run payroll** — generate salaries for each processing group, review the reconciliation, resolve exceptions and submit for approval.
5. **Release pay** — publish payslips and produce bank instructions or cash sheets.
6. **Meet obligations** — produce tax, fund and statutory reporting from the same run.
7. **Report to management** — issue headcount, cost, attendance and turnover reporting.

---

8. Navigation Overview

The navigation below is the complete business menu structure of the solution, verified against the application's menu catalogue. The catalogue contains **639 menu entries across 21 top-level business areas**, of which **579 are active**.

What a given user sees. The menu is not the same for everyone. Two things filter it:

1. **Subscription package** — the areas activated for the customer organization at sign-up.

2. **Role and permission** — within an activated area, each role is granted only the screens it needs. A user sees a section only if they are permitted at least one screen inside it.

An individual user therefore sees a subset of the structure below. Counts in brackets are the number of menu entries in the catalogue for that area.

Mobile application menu

A separate set of menu entries serves the mobile application. These are request-submission screens that mirror self-service on a phone, plus a directory:

- **Application [13]** — leave, movement, attendance adjustment, overtime, loan, IOU and IOU adjustment, allowance & deduction, market visit, remote attendance, location & device, location assign
- **Employee Directory [1]**

Coverage note

Two areas in the menu catalogue are **not delivered as screens in the current web application**:

- **Manning [40]** — a maritime crew-management area (seafarer and rank setup, crew planning, vessel certificates, bond store, portage bill, vessel cash accounts, IMO crew list, noon report). All forty entries are present in the catalogue, but no corresponding screens exist in the delivered application. This area is therefore **not part of the current product capability** and is not described elsewhere in this document.

- A small number of individual entries in other areas (for example a legacy IOU report and an inactive final-settlement entry) are likewise catalogue entries without a delivered screen.

Information on whether these are planned, retired, or reserved for a specific customer is not available in the current application.

9. User Roles and Responsibilities

Roles are configurable. The table below describes the standard role pattern delivered with the solution; organizations may define additional roles and adjust each role's scope.

Role	Primary responsibilities	Typical activities	Access scope
Employee	Manage own records and requests	Record attendance, apply for leave and movement, request adjustments, overtime, loans, expenses and assets, view payslips and balances, complete self assessment	Own data only
Line manager / supervisor	Approve and oversee the team	Approve team requests, monitor team attendance and leave, set and review performance targets, conduct assessments	Own direct and indirect reports
HR officer	Day-to-day people administration	Maintain employee records, onboarding, confirmations, movements, separations, letters and documents	Assigned business units and workplaces
HR administrator	Policy and structure	Configure organizational structure, leave types and policies, approval routes, holiday calendars, reference data, announcements and policy documents	Organization-wide within the tenant
Payroll officer	Deliver accurate pay	Assign salary structures, run and reconcile monthly payroll, process arrears, bonuses and advances, produce payslips, bank instructions and tax outputs	Assigned processing groups
Benefits / fund administrator	Administer employee funds	Provident-fund policy and eligibility, member ledgers, investments and collections, profit distribution, gratuity policy, cafeteria and deposits	Organization-wide fund data
Asset officer	Manage the asset estate	Register, assign, transfer, maintain, depreciate and dispose of assets; support separation clearance	Assigned workplaces
Training administrator	Deliver the training plan	Maintain the catalogue, plan and schedule training, track attendance, run assessment and feedback, report on training	Organization-wide training data
Approver	Authorize transactions	Act on the request types and stages assigned to them by the approval configuration	The population defined by the approval route
Management	Direct the organization	Review dashboards, workforce cost, headcount, attendance discipline, turnover and performance reporting	As granted, typically organization-wide

Role	Primary responsibilities	Typical activities	Access scope
System administrator	Govern access and configuration	Create users, assign roles and scope, configure notification categories, monitor activity	Organization-wide within the tenant
Account owner	Own the organization's subscription	The first and most senior user of the organization; holds full administrative rights across the whole organization	Entire organization

Scope principle. Every role is granted a scope — one or more business units, workplace groups and workplaces. A manager with approval rights in one business unit cannot see or act on employees in another. Owners and administrators may be granted scope across the entire organization.

---

10. Reports and Analytics

The solution provides approximately 130 standard reports and document outputs. Most can be viewed on screen, downloaded as a PDF document, or exported to a spreadsheet, and can be filtered by period, business unit, workplace, department, designation and employee.

10.1 People and organization

Report	Purpose	Business value	Typical users	Decisions supported
Employee list and export	Full workforce listing with filters	Complete, current workforce picture	HR, management	Headcount planning, audits
Workplace-wise employee breakdown	Distribution of people across locations	Reveals staffing imbalances	Management, HR	Resource allocation
Workforce planning and comparison	Planned versus actual workforce	Highlights over- and under-staffing	Management	Recruitment and budget decisions
Designation-wise turnover	Attrition by job title	Identifies where the organization loses people	HR, management	Retention initiatives
Employee ledger and details	Consolidated record of an employee's activity	Complete individual history	HR	Case handling, disputes
Movement report and history	Record of transfers and promotions	Visibility of internal mobility	HR, management	Succession and mobility planning
Employee identity card	Printable staff identity cards	Fast, consistent issuance	HR	Onboarding logistics
Confirmation, transfer, promotion, increment and separation letters	Formal employment correspondence	Professional, consistent documentation	HR	Employment record keeping

10.2 Attendance and time

Report	Purpose	Business value	Typical users	Decisions supported
Daily attendance report	Who was present, late or absent on a day	Immediate operational visibility	Manager, HR	Same-day coverage decisions
Attendance report and export	Attendance over a period per employee	Basis for discipline and payroll	HR, payroll	Penalty and pay decisions
Monthly attendance summary	Consolidated month view feeding payroll	Reliable payroll input	Payroll	Payroll accuracy
Roster report and roster details	Planned schedule versus actual	Confirms coverage was planned and met	Manager, HR	Shift planning
Attendance by roster	Attendance measured against the schedule	Exposes systematic schedule gaps	Manager	Roster redesign
Overtime report	Overtime by employee, department and period	Controls overtime cost	Manager, payroll, finance	Overtime authorization and budgeting
Job card	Individual attendance and work summary	Per-employee accountability	Manager, HR	Performance and discipline
Time-recording raw data	Underlying clock events	Investigation and dispute resolution	HR, system admin	Data quality and disputes

10.3 Leave

Report	Purpose	Business value	Typical users	Decisions supported
Leave balance report	Current balances by employee and type	Prevents over-granting of leave	HR, manager, employee	Leave approval decisions
Leave history report	Leave taken over a period	Pattern analysis and audit trail	HR, manager	Absence management
Leave summary	Aggregated leave position	Organization-level absence view	HR, management	Policy review, provisioning
Movement history	Official duty movement records	Confirms out-of-office time was authorized	HR, manager	Attendance reconciliation

10.4 Payroll, tax and disbursement

Report	Purpose	Business value	Typical users	Decisions supported
Salary details and salary sheet	Complete payroll register for the period	The primary payroll control document	Payroll, finance	Payroll sign-off

Report	Purpose	Business value	Typical users	Decisions supported
Payslip	Individual statement of earnings and deductions	Employee transparency	Employee, payroll	Pay queries
Salary summary and monthly payroll summary	Condensed payroll position	Quick management view of pay cost	Management, finance	Cost monitoring
Department-wise and cost-centre salary	Pay cost by organizational unit	Cost attribution	Finance, management	Budgeting and allocation
Salary reconciliation	Verification of the run before release	Errors caught before payment	Payroll	Release decision
Monthly salary breakdown	Component-level pay analysis	Understanding of pay composition	Payroll, finance	Structure review
Yearly salary report	Full-year pay position	Annual analysis and audit	Finance, HR	Annual review, budgeting
Daily salary report	Pay for daily-rated work	Accurate treatment of daily workers	Payroll	Daily-wage settlement
Bank advice (multiple bank formats)	Payment instruction to the bank	Timely, error-free disbursement	Payroll, finance	Payment execution
Cash payment sheet and payslip	Payment for cash-paid employees	Controlled cash disbursement	Payroll, finance	Cash handling
Payment and salary requisition	Funding request for the payroll	Treasury planning	Finance	Cash-flow management
Advance salary report	Advances issued and outstanding	Control of early payments	Payroll, finance	Advance approval
Bonus report and bonus requisition	Bonus payments and their funding	Controlled bonus disbursement	Payroll, finance	Bonus approval
Salary certificate	Formal confirmation of earnings	Supports employee banking and visa needs	Employee, HR	Employee service
Income-tax deduction and full-year tax report	Tax withheld per employee and period	Statutory compliance	Payroll, finance	Tax filing
Salary tax certificate	Employee tax statement	Employee tax filing support	Employee, payroll	Individual tax returns
Salary comparative analysis	Period-over-period pay comparison	Detects unexpected movement	Management, payroll	Variance investigation
Cost to company	Total employment cost per employee	True cost visibility	Management, finance	Budgeting and offers

10.5 Funds, loans and settlement

Report	Purpose	Business value	Typical users	Decisions supported
Employee-wise provident fund details	Member contribution and balance detail	Member confidence and audit	Fund admin, employee	Fund administration
Month-wise fund detail and annual statement	Member position over time	Transparent member reporting	Fund admin, employee	Member queries
Fund investment reports	Investments by type and organization	Fund governance	Fund admin, finance	Investment decisions
Refund and earnings report	Fund returns and refunds	Distribution accuracy	Fund admin	Profit distribution
Loan history and loan details	Loans issued, outstanding and repaid	Exposure and recovery visibility	Finance, HR	Lending decisions
Provident-fund loan lifecycle	Full history of a fund loan	Complete loan audit trail	Fund admin, finance	Settlement and disputes
Final settlement report	The settlement figure and its components	Defensible, complete exit payment	HR, payroll, finance	Settlement approval
Final settlement due salary and detail	Supporting detail behind the settlement	Resolves settlement queries	Payroll	Exit disputes

10.6 Assets, expenses and facilities

Report	Purpose	Business value	Typical users	Decisions supported
Asset register and asset detail	What the organization owns and where it is	Asset control	Asset officer, finance	Stock-taking, insurance valuation
Asset depreciation report	Value consumed over time	Accurate asset valuation	Finance	Financial reporting
Asset profile per employee	What each employee holds	Custody accountability	HR, asset officer	Separation clearance
Employee expense report	Claims submitted and settled	Expense control	Finance, manager	Claim approval, budgeting
Daily and monthly cafeteria reports	Meal consumption and subsidy cost	Facility cost control	HR admin, finance	Catering decisions
Food allowance report	Meal allowance per employee and period	Correct allowance treatment	Payroll, HR	Allowance settlement

10.7 Performance and training

Report	Purpose	Business value	Typical users	Decisions supported
Individual scorecard	Achievement against targets per employee	Objective performance basis	Employee, manager	Performance conversations
Yearly performance report	Annual performance across the workforce	Organization-wide performance view	Management, HR	Talent decisions
Performance appraisal report	Appraisal grades and outcomes	Consistent appraisal decisions	HR, management	Increment and promotion decisions
Target mismatch report	Where targets are unset or inconsistent	Ensures complete target coverage	HR	Cycle readiness
Talent grid views	Performance and potential distribution	Succession and development planning	Management, HR	Talent investment
Training inventory and detail	Training delivered, to whom, at what cost	Justifies training investment	HR, management	Training budget
Training diary and calendar	Training schedule and history	Planning and participation tracking	Training admin	Scheduling decisions

11. Business Integrations

PeopleDesk connects to several external business systems and channels. Each integration exists to remove manual re-entry of information between systems.

Integration	Why it exists	Business value	Operational benefit
Time-recording devices	Attendance must reflect what actually happened, not what was reported	Removes manual attendance registers and the reconciliation effort behind them	Clock events are collected automatically at short, regular intervals through the working day, so exceptions surface while they can still be corrected
Recruitment system	Hiring decisions are made in a dedicated recruitment system	Avoids re-typing candidate data and losing information at the hiring boundary	Employees who have been hired externally can be brought into PeopleDesk and turned into full employee records, and the recruitment system is informed once onboarding completes
Banking formats	Employees must be paid through the organization's banks	Payment instructions match each bank's required format	Salary, bonus and advance disbursement files are produced directly from the approved payroll, with formats for several banks and for electronic funds transfer
Mobile application	Employees and managers are not always at a desk	Extends attendance, requests and approvals beyond the office	Mobile attendance where permitted, mobile approvals, and push notifications on registered devices

Integration	Why it exists	Business value	Operational benefit
E-mail and messaging	People act faster when they are told	Requests do not stall waiting to be noticed	Approval requests, reminders and status changes are delivered by e-mail and message alongside in-application alerts
Payroll and workforce data exchange	Some organizations operate a separate finance or workforce platform	Keeps the two systems aligned without duplicate maintenance	Structured templates allow employee, cost-centre and ledger mapping data to be exchanged with an external platform
Document storage	Employment generates documents that must be retained and retrieved	Documents remain available and attached to the right record	Certificates, identity documents, attachments and generated letters are stored against the employee and retrievable on demand

Where an organization requires an integration not listed above, that capability is not part of the current application.

---

12. Business Benefits

Operational efficiency

Routine transactions that would otherwise move by e-mail, paper form or spreadsheet — leave, attendance correction, overtime, loans, expenses, asset requests — are submitted, routed and settled inside one system. HR is removed from the middle of thousands of small requests each month.

Automation

Substantial parts of the operation run without human intervention: attendance is collected and processed continuously, rosters are generated monthly, leave balances accrue on schedule, payroll runs are processed automatically once requested, loan instalments are recovered, and expiring subscriptions and stale records are cleaned up. Forty-eight automated processes run in the background.

Compliance

Every material transaction is approved by an identified person, at a recorded time, through a configured route, and the history is retained permanently. Statutory outputs for income tax, provident fund and gratuity are produced from the same data used to pay employees, so what is reported and what is paid cannot diverge. Policy documents can be published with acknowledgement tracked per employee.

Better decisions

Management sees current information rather than reconstructed spreadsheets: workforce cost by department and cost centre, headcount and its distribution, attendance discipline, overtime consumption, turnover by designation, performance distribution and training investment.

Productivity

Employees resolve routine matters themselves, at any time, from web or mobile. Managers see all pending decisions in one place and can act in bulk. Payroll teams close the month from validated inputs rather than assembling them.

Data visibility

One employee record serves every module, so a change made once appears everywhere. Approximately 130 reports expose that data in the form each audience needs, on screen, as a document, or as a spreadsheet for further analysis.

Management reporting

Standard reporting covers people, time, pay, funds, assets, expenses, performance and training — sufficient for routine management review, board reporting, budget preparation and audit without bespoke report-building.

Improved service to employees

Employees see their own balances, payslips, attendance and request status without asking anyone. Requests are acknowledged immediately and their progress is visible. Documents such as salary certificates are requested and issued through the system rather than by e-mail chains.

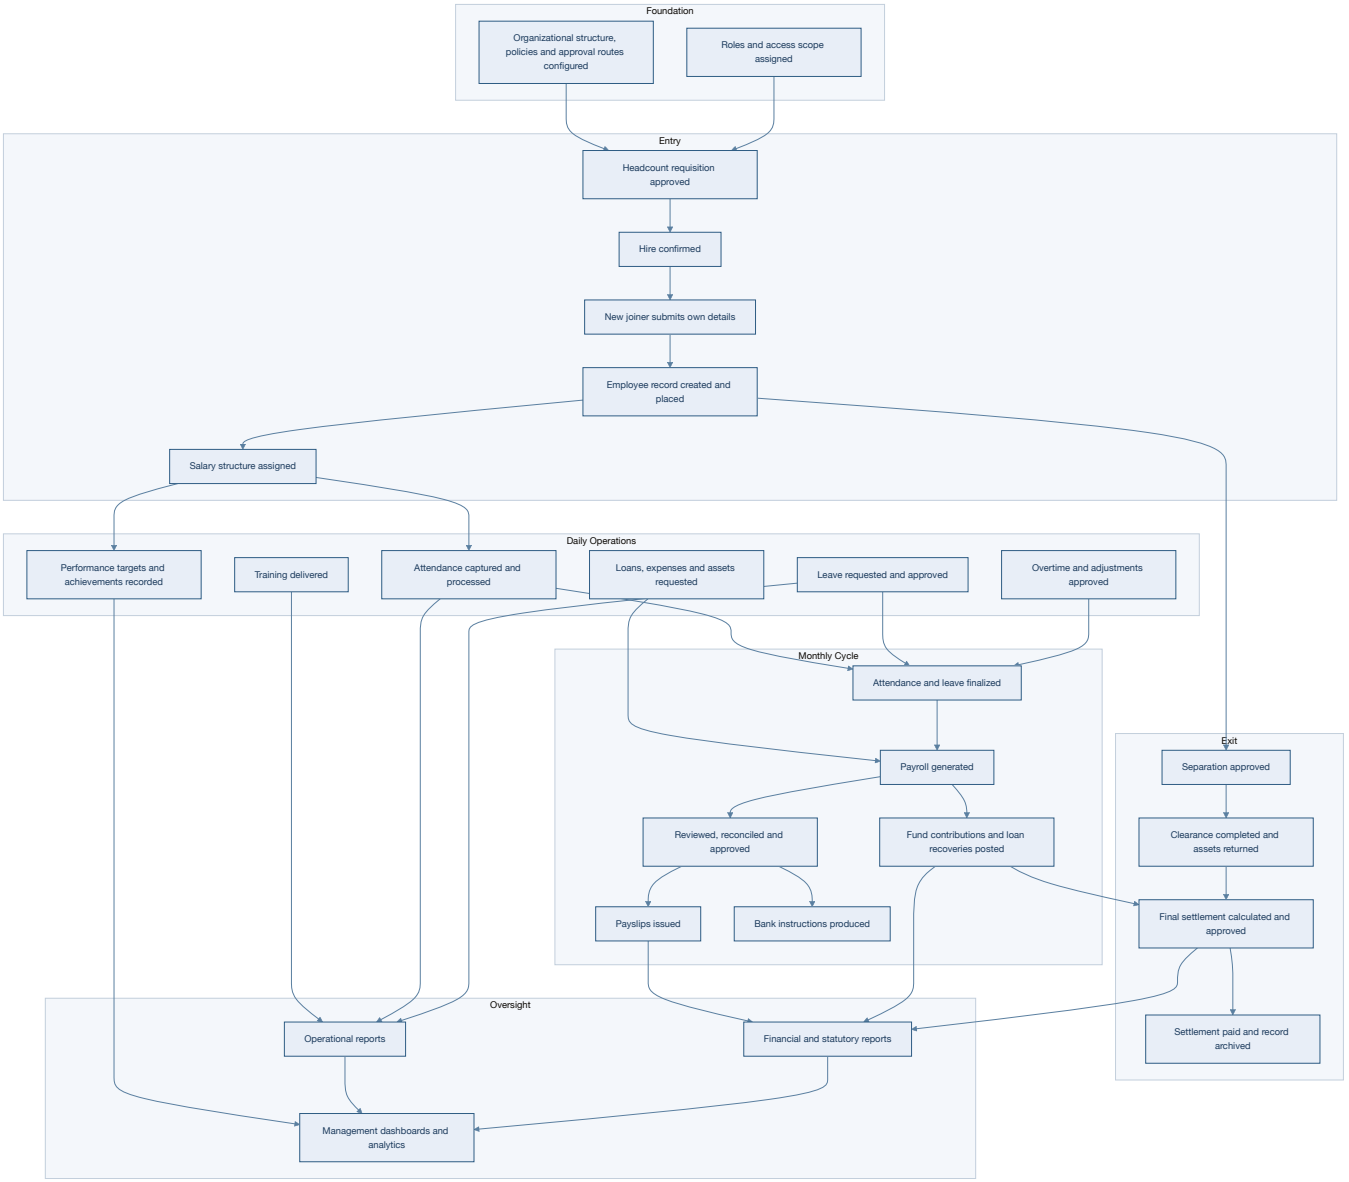

Adaptability

Organizational structure, policies, approval routes, leave types, pay elements, penalties and access rights are all configured rather than built. As the organization changes, the system is reconfigured rather than rebuilt — and organizations with different policies can operate side by side on the same service.

---

13. End-to-End Business Flow

The diagram below shows how the solution supports an organization from the arrival of a new employee to their departure, and how the operational modules feed the monthly financial cycle and management reporting.

Narrative. The organization first models itself in the system: its structure, its policies, its approval routes and its roles. New employees enter through an approved headcount request and an onboarding process in which they supply much of their own data. Once placed in the organization and assigned a salary structure, the employee generates a continuous stream of operational activity — attendance, leave, overtime, requests, training and performance — all of it governed by approval and recorded against the employee record.

Each month that operational activity converges on the payroll cycle. Attendance and leave are finalized, pay is calculated from the salary structure adjusted for unpaid days, overtime, penalties, allowances, loan instalments and statutory deductions, then reviewed, approved and released as payslips and bank instructions. The same cycle posts fund contributions and recovers loans.

When an employee leaves, the system pulls together every open position across payroll, leave, loans, funds and assets into one settlement figure, supported by clearance and a formal settlement document.

Throughout, the same data drives operational reporting for supervisors, financial and statutory reporting for finance, and dashboards and analytics for management — so that what the organization pays, what it reports and what it decides on all rest on the same set of facts.

14. Glossary

Term	Meaning
Account / Organization	A client organization operating in the solution, with its own data, structure and policies, separated from all others
Employee	A person with an employment record in the solution
Employee ID	The unique, unchanging identifier assigned to an employee
Business unit	The highest organizational grouping within an organization
Workplace / Workplace group	A physical or organizational operating location, and a grouping of such locations
Department / Section	Functional divisions within a business unit
Designation	An employee's job title
Grade / Band	A seniority and compensation level
Cost centre	The financial grouping to which an employee's cost is booked
Employment type	The category of employment — for example permanent, contract, intern or consultant
Payroll group	A set of employees processed together on a shared pay calendar
Reporting manager / Line manager	The employee to whom another reports; usually the first approver
Dotted-line supervisor	A secondary supervisor in a matrix reporting relationship
Probation	The initial employment period with its own policy treatment
Confirmation	The transition from probation to permanent status
Shift	A defined working window with start, end, break and grace settings
Roster	The schedule assigning employees to shifts across a period
Grace period	The permitted lateness before an arrival counts as late
Attendance adjustment / Regularization	An employee-raised correction to a missing or incorrect attendance entry
Overtime	Approved work beyond scheduled hours
Movement	Authorized absence from the workplace on official duty
Leave type	A category of leave, such as casual, sick, earned, unpaid, maternity or paternity
Entitlement	The quantity of a leave type granted for a cycle
Accrual	The periodic crediting of leave balance
Carry forward	Unused balance moved into the next cycle, subject to limits
Encashment	The conversion of unused leave into pay

Term	Meaning
Unpaid leave	Absence beyond entitlement, which reduces pay
Gross salary	Earnings before deductions
Net pay	The amount payable after deductions
Basic	The core salary component from which other components are commonly derived
Earning / Deduction element	A positive or negative component of pay
Payroll run	The periodic process that calculates and finalizes salaries
Payslip	An individual statement of earnings and deductions for a period
Arrears	Retroactive pay adjustments applied in a later run
Bank advice	The payment instruction file issued to a bank
Provident fund	A savings fund built from employee and employer contributions
Member ledger	The record of an individual's fund contributions, withdrawals and earnings
Profit share	The distribution of investment returns to fund members
Gratuity	An end-of-service benefit based on length of service
Final settlement	The consolidated closing payment on separation
Separation clearance	Departmental confirmation that a leaver has no outstanding obligations
Requisition	A formal request — for headcount, an asset, training or an expense
Approval route / pipeline	The ordered set of approvers a request must pass through
Approval stage	One step in an approval route
Auto-approval	Immediate approval applied where no route is configured for a request type
Self-service	The area where employees manage their own records and requests
Manager self-service	The area where managers act on behalf of their team
Role	A named bundle of permissions assigned to users
Scope	The part of the organization a role may see and act on
Performance indicator	A defined measure of performance with a target and weighting
Behavioural assessment	Questionnaire-based evaluation of how work is performed
Appraisal grade	The outcome band derived from a final performance score
Individual development plan	An agreed plan of development actions for an employee
Depreciation	The reduction in an asset's value over time
Book value	An asset's recorded value less accumulated depreciation

15. Conclusion

PeopleDesk is a comprehensive Human Resource Management System (HRMS) covering the complete working life of an employee within a single, governed system.

It brings together seventeen business modules — employee records, organizational structure, attendance, leave, payroll and tax, allowances and deductions, loans, benefits and funds, retirement and settlement, recruitment intake and onboarding, performance, training, assets, expenses, approval workflow, administration and workplace services — around one employee record and one approval engine.

The result for an organization is:

- **One source of truth** for workforce data, rather than reconciling competing spreadsheets;
- **Automated operations**, with attendance collected continuously, balances accrued on schedule, payroll processed from validated inputs and recoveries applied without manual tracking;
- **Governed change**, with forty-four request types routed through configurable approval and retained as permanent history;
- **Accurate, timely pay**, produced from recorded facts and released with the statutory and banking outputs the organization needs;
- **Visibility**, through approximately 130 standard reports and management analytics covering people, time, cost, funds, assets and performance;
- **Employee empowerment**, through full self-service on web and mobile;
- **Adaptability**, because structure, policy, approval and access are configured rather than built — allowing organizations with different requirements to operate on the same solution.

For organizations seeking to move HR and payroll from manual, fragmented administration to a controlled, automated and transparent operation, PeopleDesk provides the functional depth, governance and reporting required to do so.

Prepared 22 July 2026. This document describes capabilities confirmed to exist in the delivered solution. Where a capability could not be confirmed, this is stated explicitly rather than assumed. Configuration-dependent behaviour varies by organization and is agreed during implementation.
